Intelligent Manufacturing

Connecting every aspect of your operations brings greater visibility of your people, inputs, outputs and freight, so you can continue to modernise your manufacturing business. Telstra experts can help you drive efficiencies by deploying powerful automation, AI and ML technologies.

Intelligent Manufacturing

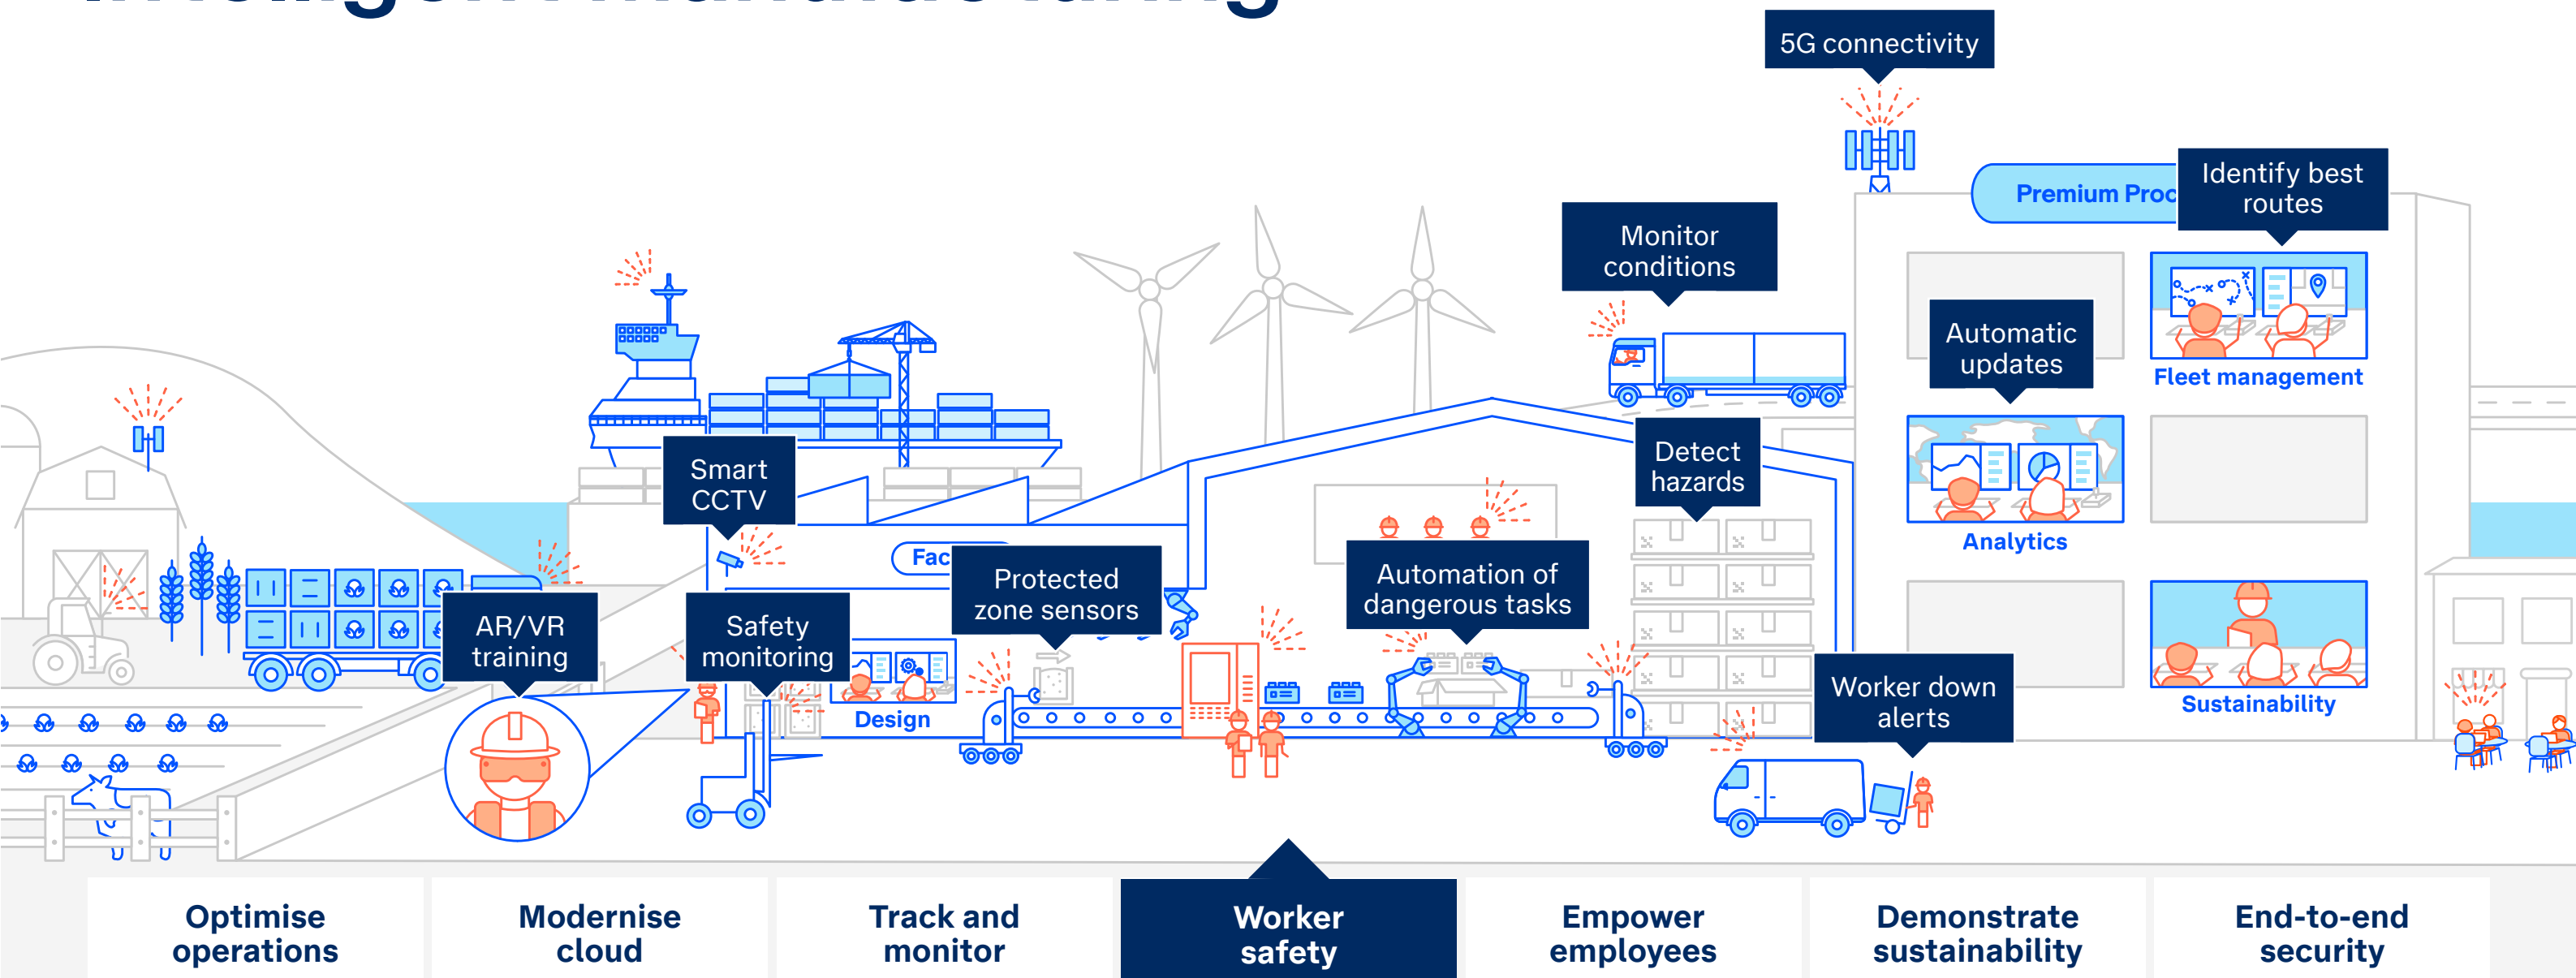

Innovate with confidence thanks to end-to-end control over your multicloud and network. Telstra can migrate legacy datacentres to the cloud and uplift old infrastructure to unify systems, connect key investments and gain business visibility. Fine-tune workloads and application pathways from the cloud to the network edge – optimising cost, security and performance.

Intelligent Manufacturing

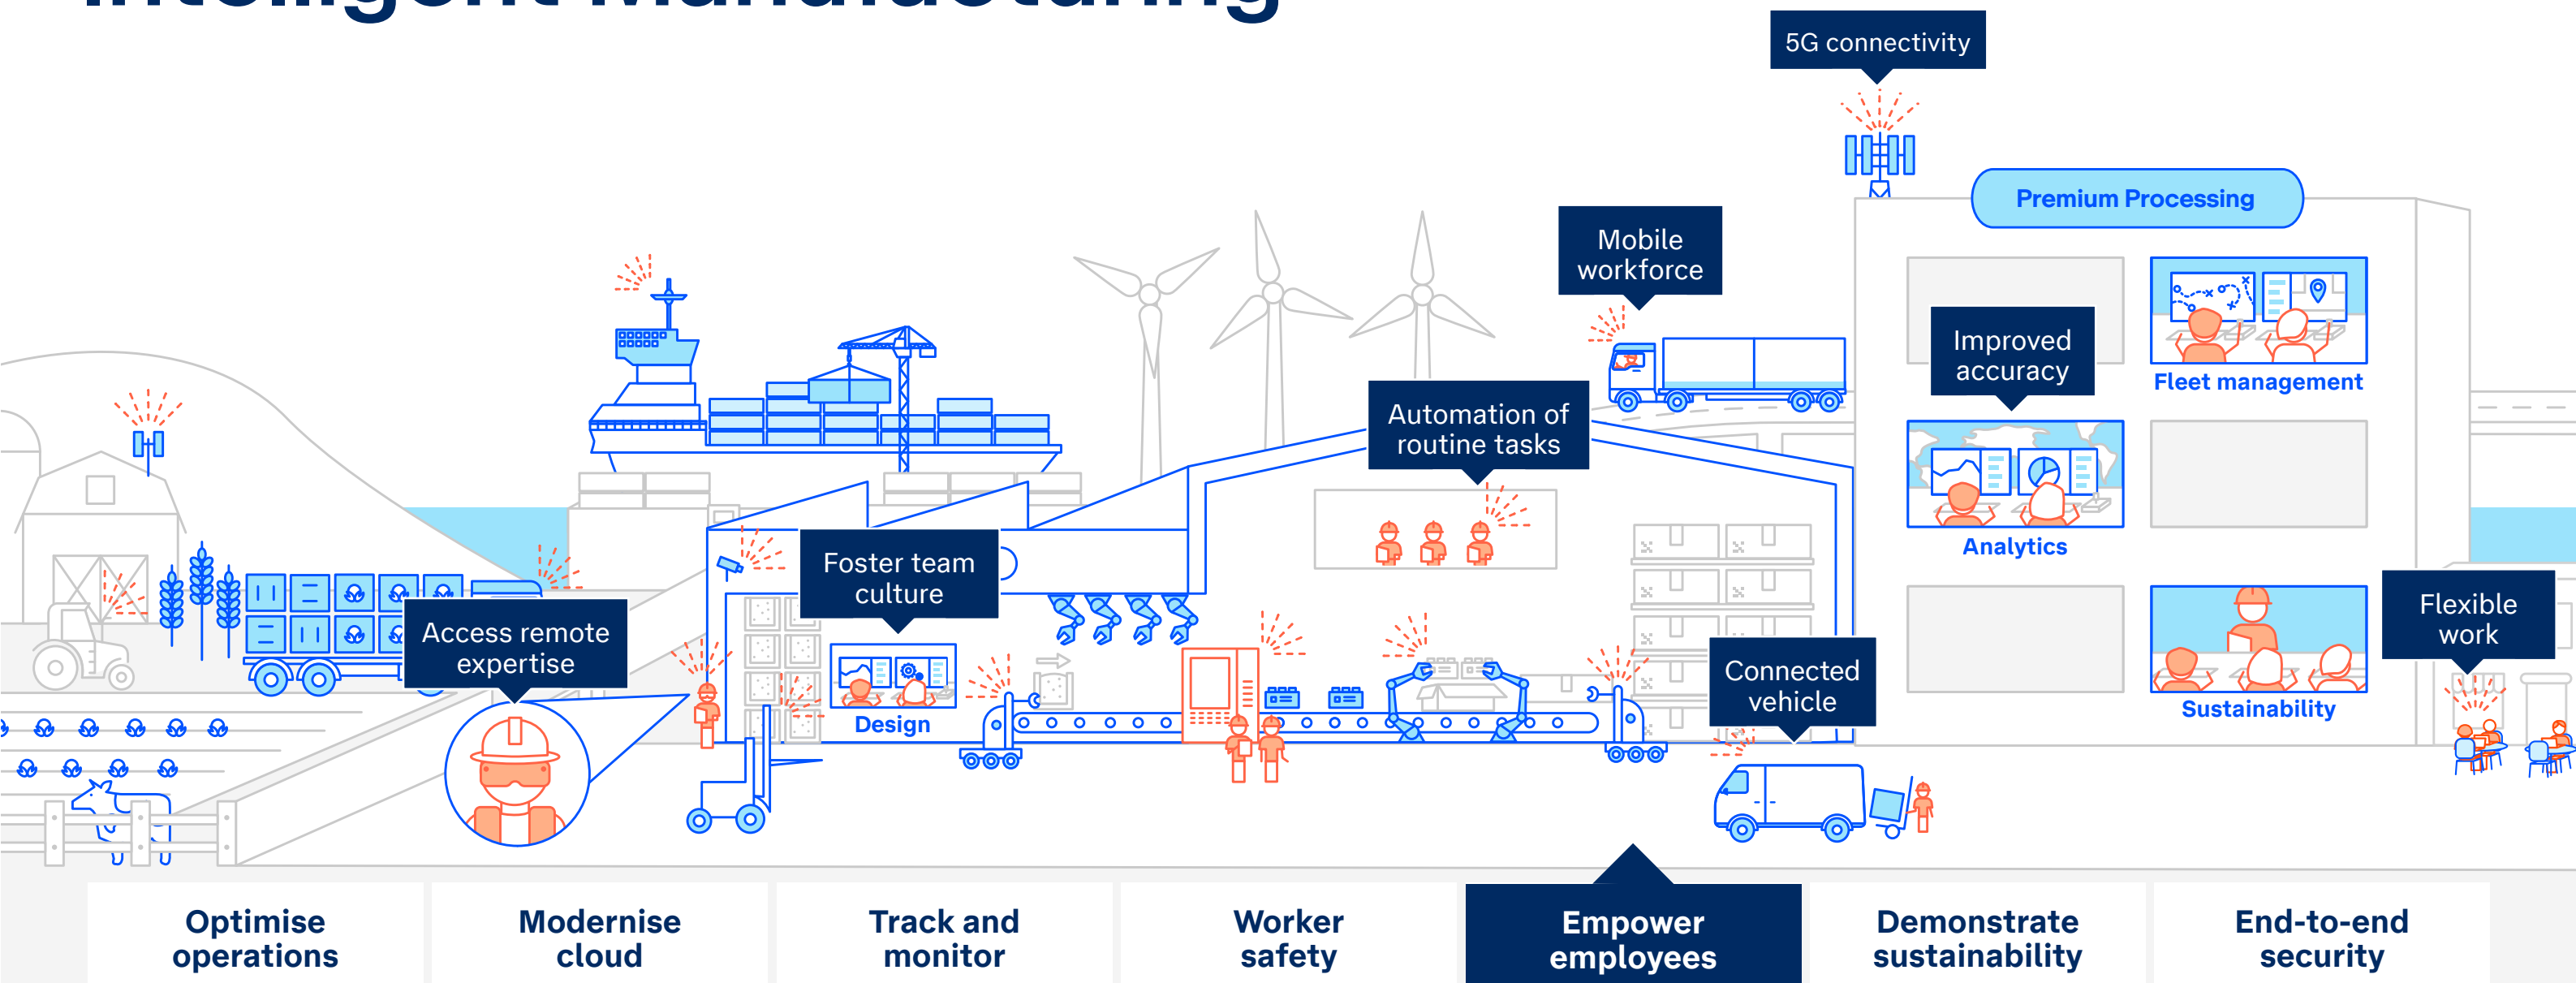

Monitor the condition and location of inputs, materials, stock, machinery and equipment to gain a complete view of your multi-stage operations. Telstra's flexible automation solutions and end-to-end customised services can drive intelligent decision-making in near real time, eliminate duplication of hardware and software, enhance the safety of critical systems and ensure resources are used efficiently.

Intelligent Manufacturing

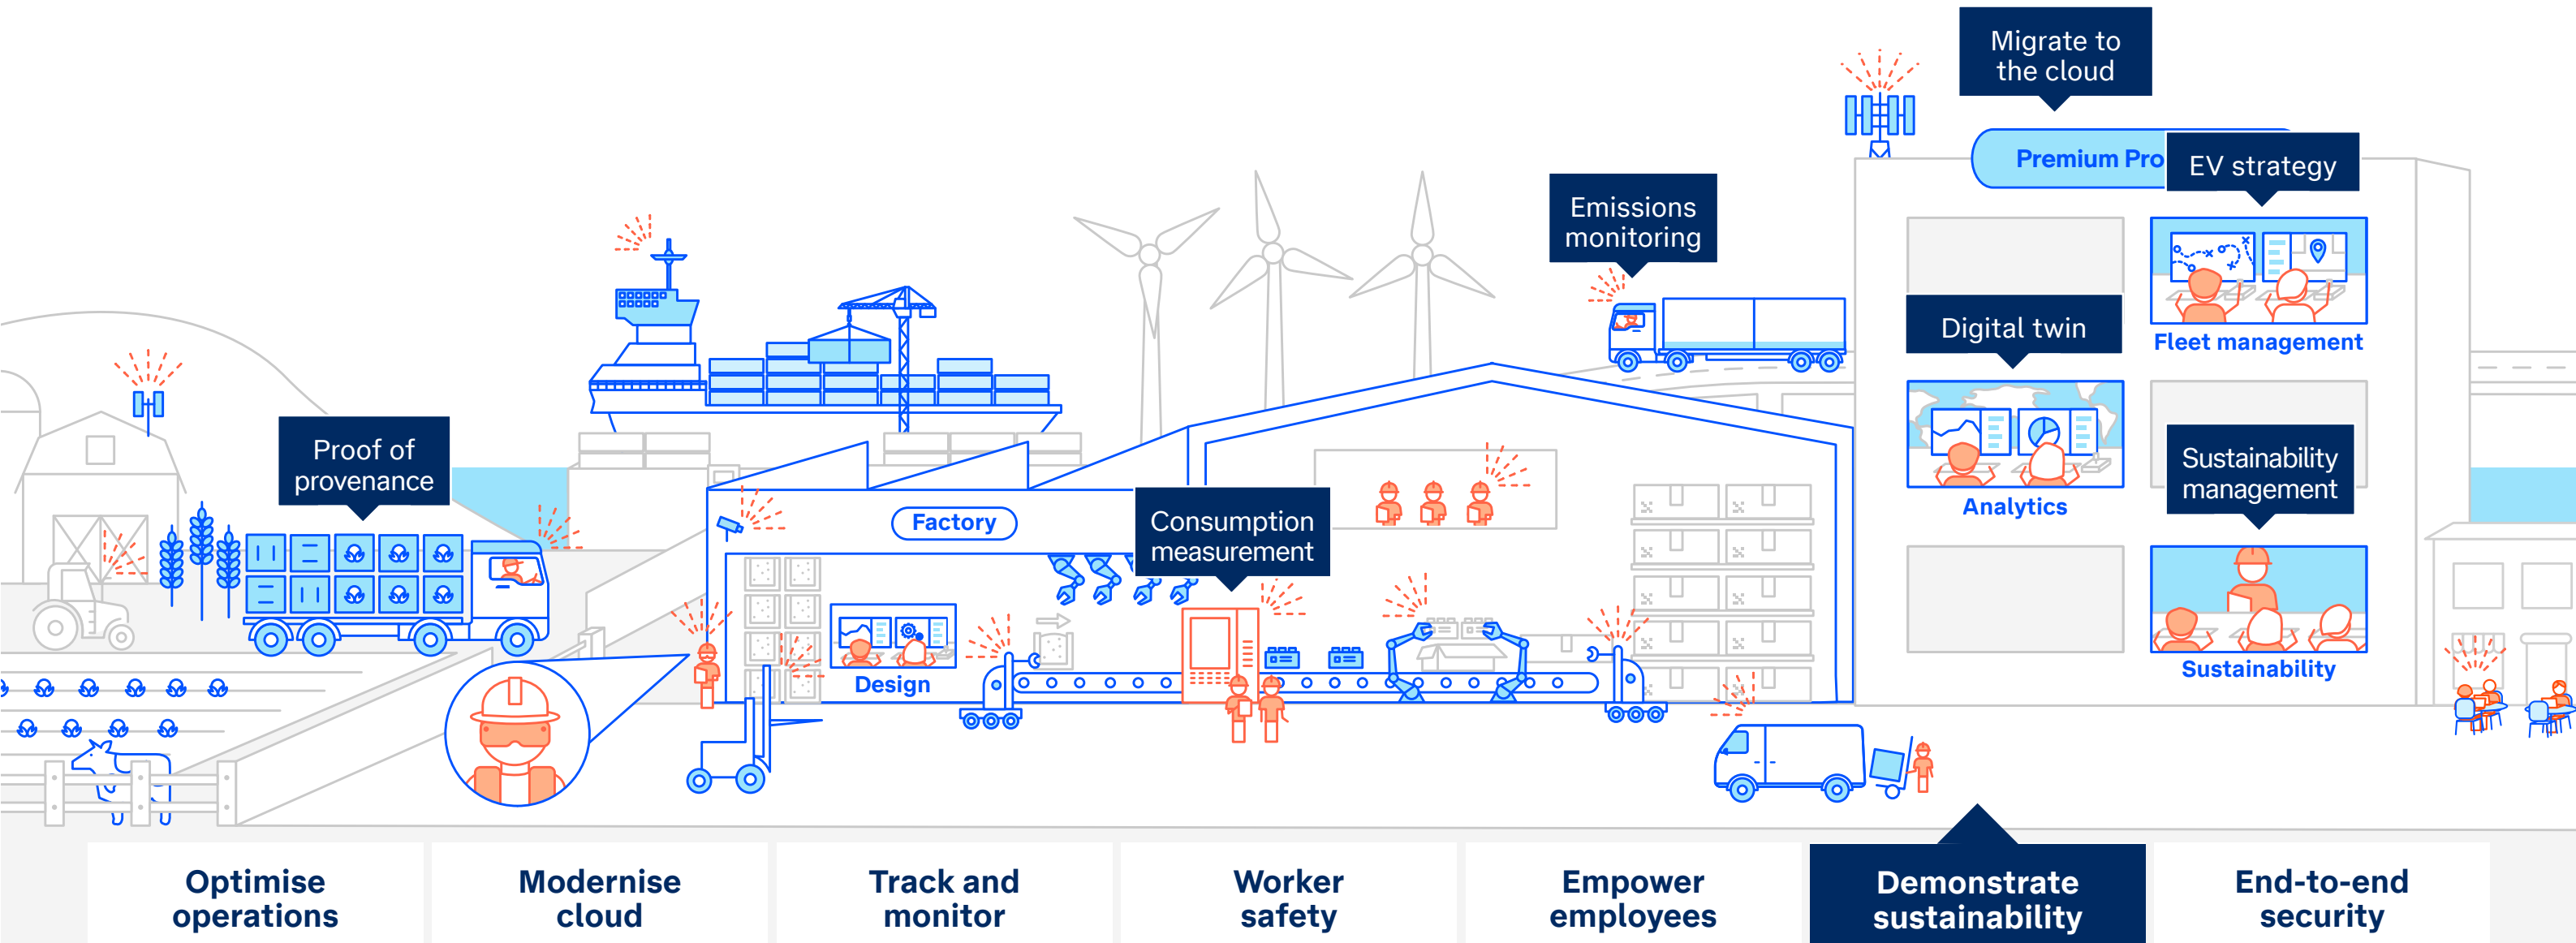

Protect your employees' wellbeing and improve workplace safety, compliance and reporting through safer, more efficient manufacturing processes with the help of Telstra experts. Connected wearables, cameras, machinery and protected zone sensors give you visibility of workers, their location and vital signs, as well as help you monitor for hazardous conditions, 24/7.

Intelligent Manufacturing

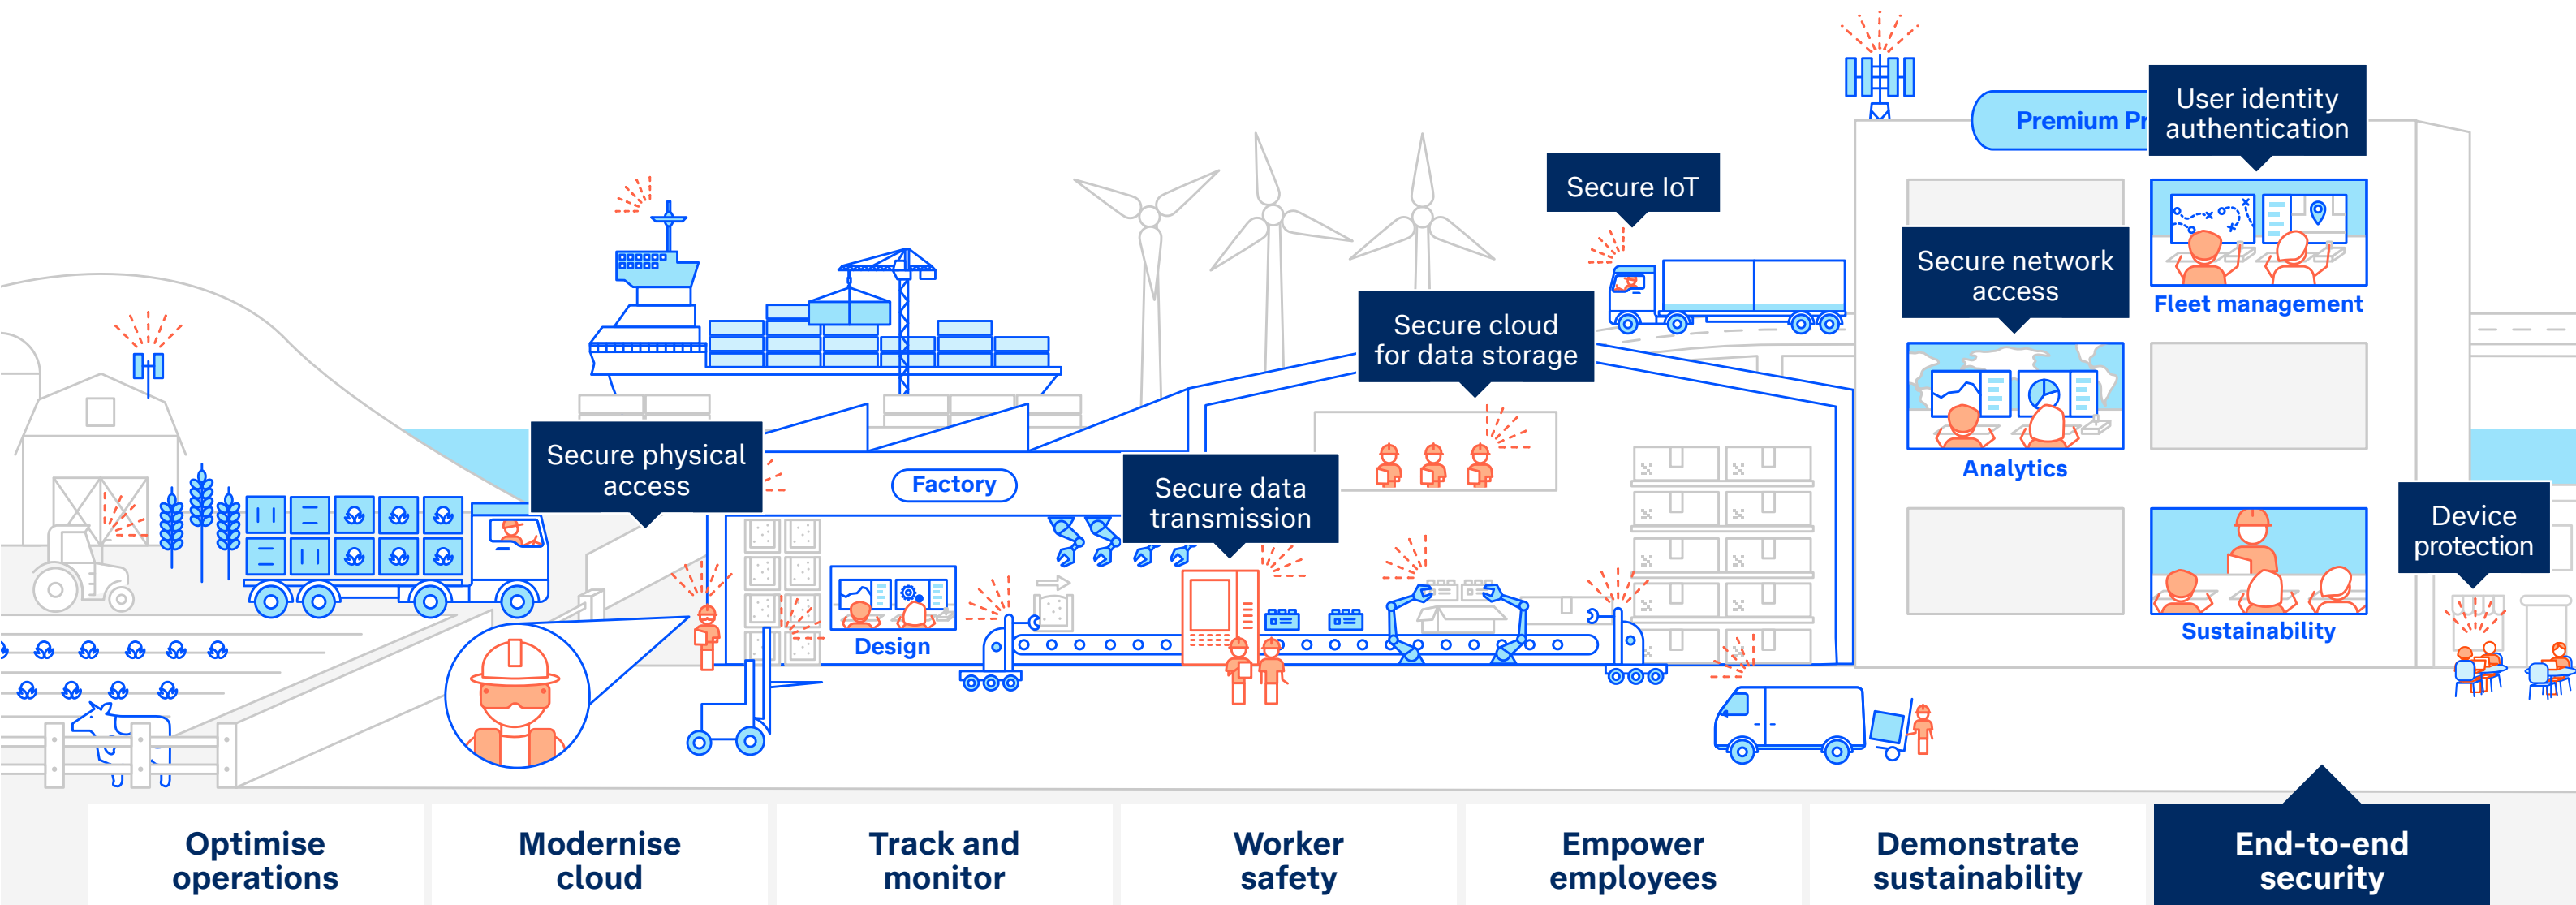

Empower your office-based, on-site and mobile workers and drivers to be more efficient, effective and connected. Telstra can help you switch to modern digital tools that improve teamwork, automate time-consuming paperwork and speed up project management workflows. By modernising and automating operations, we can also help you cope with the skills shortage.

Intelligent Manufacturing

As the expectation for supply chain traceability and Scope 3 accountability increases, Telstra can help you can obtain greater visibility over product provenance and automate reporting, so you can keep up with customer and shareholder demands. Now you can manage your organisation's environmental impact with unified measurement and reporting across your operations, helping to enable actionable insights.

Intelligent Manufacturing

Boost your defences against the cybersecurity challenges of digital transformation with multi-layered protection and 24/7 monitoring from our Security Operations Centres. Locally developed and designed with Australian customers in mind, we can help keep you safe as you integrate and connect technologies throughout your operations.
