

Telstra IoT/M2M Certified Embedded Modules and Integrated Devices

Published Date: 10 January 2020

Listed below are the 4G-LTE Cellular Embedded Modules and Integrated Devices that have been certified for use on the Telstra Mobile Network. The devices in this list have passed Telstra's IoT/M2M Certification Program as meeting Telstra's mandatory criteria and guidelines. Telstra's guidelines also ensure that ACMA regulatory and RCM requirements have been met.

As of December 2018, Telstra no longer accepts 3G only devices into the IoT/M2M Certification Program. In October 2019, Telstra announced that its 3G WCDMA network will be shut down in June 2024.

Telstra requires all new IoT/M2M cellular capable devices to support 4G-LTE (and VoLTE if voice is required 4G-LTE presents several unique technological improvements that provide significant benefits to IoT/M2M implementations such as much greater network capacity and efficiency, and greater in-building penetration when 4GX Band 28 is supported.

Telstra's coverage bands are 4G-LTE band 28 and 3, and 3G-WCDMA band 5, therefore any device must support these three bands as a minimum (see Telstra's IoT network coverage map).

All modules and devices certified via Telstra's IoT/M2M Certification Program support remote firmware upgrade capability.
