

Cyber Security Advisory Services

Access to strategic security advice for your organisation

Introduction

The role of the CISO has never been more important for aligning security and business objectives. It ensures compliance with multiple and at times overlapping standards, and the protection of data and technology. Despite these clear requirements, growing organisations often work without one.

The latest Telstra Security report confirmed that smaller companies are in no way immune to the same security threats faced by larger organisations. With a smaller brand presence to weather the reputational storm and higher dependence on fewer revenue streams, the impact of a cyber security incident on small and mid-sized businesses can be devastating.

Telstra Purple Cyber Security Advisory Services provides clients with advice related to strategic information security governance, risk and compliance, particularly for those that cannot justify a full-time CISO.

Summary

Telstra Purple Cyber Security Advisory Services provide strategic guidance around risk, compliance, privacy, incident management, project oversight, architecture and design - as a service.

Fully conversant with security assessment practices like penetration testing, managed threat and vulnerability services, the advisory service will drive improvement and change in both security technology and practices.

Partnering with Telstra Purple adds a further layer of security strength and credibility to your business with the precise scope tailored to your individual requirements.

For small but growing businesses, particularly those in heavily regulated industries, it is the ideal solution when your IT department doesn't have the bandwidth to work on strategic security improvements.

Customer Benefits

 Expertise	 Cost Effective	 Integrated	 Collaboration
<ul style="list-style-type: none">• Ongoing strategic security advice for small to mid-sized organisations	<ul style="list-style-type: none">• A more affordable option than taking on the cost of a dedicated CISO	<ul style="list-style-type: none">• Becomes an integral part of your security team and attends scheduled meetings, reviews deliverables and ensures project progress	<ul style="list-style-type: none">• Works hand-in-hand with your IT department to tailor a security strategy for your business
 Local	 Flexibility	 Reputation

About Telstra Purple

Telstra Purple has built a team of experienced consultants in specialist areas, providing networking, data centre and information security advice and solutions to Government and private organisations throughout Australia. Purple's testing and audit methodology has been fine-tuned over more than fifteen years to ensure the most comprehensive review and testing, with the most accurate results, is conducted in the most efficient manner.

Our history in security testing includes table-top exercises, phishing simulations, vulnerability assessments, infrastructure penetration tests, web application penetration tests, social engineering and red team engagements.

No two clients are the same and we recognise this by embracing flexibility with regard to scheduling, resourcing and scoping of engagements.
