

Maximise your SAP investment while setting up for the future

Wouldn't it be good if you could maximise the benefits of SAP with Azure—enhancing the scalability, cost-effectiveness, and security of your ERP—while spending more time on innovating and running your core business?

Well, now you can.

Introducing T-SAP

Your ERP is the digital backbone of your business, which means ensuring it's up and running effectively is critical to your operations. However, constantly having to refresh and manage your environment can be costly and time-consuming.

That's why we've introduced T-SAP. By moving SAP to a managed Azure environment, you gain the flexibility and agility you need to future-proof your business, without the pressure of keeping everything on and optimised yourself.

T-SAP is the best of both worlds.

Designed and built with a focus on leveraging modern, market-leading Azure infrastructure and benefits, it provides the foundation for your competitive advantage.

Platform implementation

Install a production platform on Azure cloud which offers leading service-level agreements.

SAP migration & management

We'll migrate and manage your SAP so you can spend more time on innovating your core business.

Intelligence and insights

Migrate ERP data to Azure Synapse to unlock the potential of your data and improve operations.

Managed end-to-end

We help ensure your SAP is always managed, patched, and upgraded with a single point of accountability.

How Azure enhances SAP

Scalability

Scale tech and operational workloads seamlessly with enhanced agility.

Cost efficiency

Shared management platform reduces operational costs and increases transparency.

Agility

Provision apps faster and deploy more frequent “value drops” with integrated DevOps.

Innovation

Collate and manage all your data for better insights and data-driven innovation.

Security

Enhance security and meet compliance with world-leading threat intelligence.

Why move SAP to Azure?

Our partnership with Microsoft, one of SAP's leading partners, opens the door to more benefits and possibilities for your business.

Seamless experience

From engineers sitting in the same office to combined support models, our focus is seamless experience.

Enhance data opportunities

Integrate your SAP and non-SAP data on Azure to create real-time, business intelligence-enhanced dashboards.

Robust security

Azure offers SAP /HANA certified VMs to run mission-critical apps in more regions than any other provider.

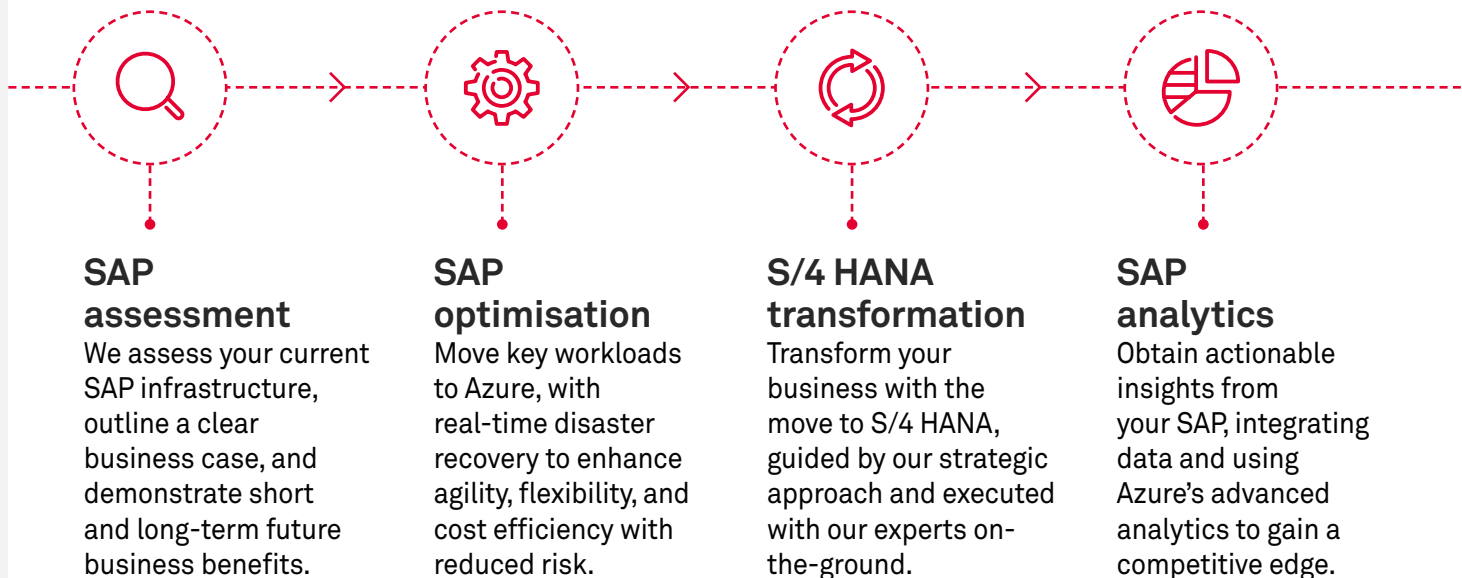

Access more innovation

We're constantly co-developing product integrations, best practices, and reference architectures to enhance innovation.

Helping you on your journey to maximising SAP

We can help you get the most out of your current SAP investment while seizing the S/4HANA opportunity. We'll help you transition to Azure to better transform for the future and enhance your competitive edge.

Why trust us for this journey

People

We bring together our over 1,500 diverse tech experts with key industry expertise with yours to solve business challenges at pace.

Partnerships

Telstra has a long-standing partnership with Microsoft and highly recognised with various advanced specialisations and accreditations across cloud, security, and data/AI. Telstra is also one of the few Australia-based Azure Expert Managed Service Partners.
