ELECTRONIC LODGEMENT

Dear Sir or Madam

Investor Day – slide presentations

In accordance with the Listing Rules, I attach a copy of the presentations to be delivered at Telstra’s Investor Day, for release to the market.

Yours faithfully

Damien Coleman
Company Secretary
These presentations include certain forward-looking statements that are based on information and assumptions known to date and are subject to various risks and uncertainties. Actual results, performance or achievements could be significantly different from those expressed in, or implied by, these forward-looking statements. Such forward-looking statements are not guarantees of future performance and involve known and unknown risks, uncertainties and other factors, many of which are beyond the control of Telstra, which may cause actual results to differ materially from those expressed in the statements contained in these presentations. For example, the factors that are likely to affect the results of Telstra include general economic conditions in Australia; exchange rates; competition in the markets in which Telstra will operate; the inherent regulatory risks in the businesses of Telstra; the substantial technological changes taking place in the telecommunications industry; and the continuing growth in the data, internet, mobile and other telecommunications markets where Telstra will operate. A number of these factors are described in Telstra’s Financial Report dated 9 August 2012 and 2012 Debt Issuance Prospectus lodged with the ASX and available on Telstra’s Investor Centre website www.telstra.com/investor.

All forward-looking figures in this presentation are unaudited and based on A-IFRS. Certain figures may be subject to rounding differences. All market share information in this presentation is based on management estimates based on internally available information unless otherwise indicated.

All amounts are in Australian Dollars unless otherwise stated.

INDUSTRY TRENDS ARE ACCELERATING

DIGITISATION

NETWORKED WORLD

THE CLOUD

THE POWER OF THE CONSUMER

INTERACTIONS

OUR STRATEGIC PRIORITIES ARE SERVING US WELL AND REMAIN UNCHANGED

IMPROVE CUSTOMER SATISFACTION

RETAIN AND GROW CUSTOMER NUMBERS

SIMPLIFY THE BUSINESS

BUILD NEW GROWTH BUSINESSES
OUR FOCUS FOR FY13

- Expanding Our Leadership in Mobiles
- Winning in Fixed
- Delivering on the Simplification Agenda
- Building Our Growth Businesses
- Creating a Customer Service Culture

EXPANDING OUR LEADERSHIP IN MOBILES

- Mobile EBITDA now exceeds PSTN EBITDA
- Our Mobile Network is a key differentiator
- Acceleration of our 4G network roll out is now underway
- Over 820,000 4G devices including 405,000 handsets sold

HOW WE DIFFERENTIATE IN MOBILE

"Why Telstra" in Mobile is founded on network superiority

- "Coverage: the network is far better than anyone else; that is what we experience in this area"
- "They provide the best phone coverage compared to any other provider"
- "The best coverage available"
- "Just the signal; the fact it works in more places than others"
WINNING IN FIXED

KEY PRIORITIES:

› GROWING FIXED BROADBAND
› MANAGING PSTN DECLINE
› SUCCESSFULLY TRANSITIONING TO THE NBN

DELIVERING ON THE SIMPLIFICATION AGENDA

› BUSINESS IMPROVEMENT SUPPORTS ALL OUR STRATEGIC PRIORITIES
› $1.1B IN PRODUCTIVITY BENEFITS DELIVERED ACROSS THE BUSINESS IN FY12
› OUR PRODUCTIVITY ASPIRATIONS FOR FY13 ARE SIMILAR TO FY12
BUILDING OUR GROWTH BUSINESSES

- OUR GROWTH OPPORTUNITIES COMPLEMENT OUR CORE BUSINESS
- WE INTEND TO GROW IN THESE NEW AREAS BY LEVERAGING THE CORE OFFERINGS WE ALREADY HAVE IN THE MARKET PLACE

TELSTRA MEDIA GROUP

- MEDIA ENTERTAINMENT AND SERVICES CONTENT
- LEADERSHIP IN MULTI-SCREEN IPTV, PREMIUM INTERNATIONAL CONTENT, LOCAL CONTENT AND SPORT
- WE ARE WORKING WITH FOXTEL TO INCREASE PAY TV PENETRATION
- WE CONTINUE TO TRANSFORM SENSIS TO BE AUSTRALIA’S LEADING DIGITAL MARKETING SERVICES PROVIDER FOR SME
Creating a Customer Service Culture

- Customer service initiatives are being rolled out across the entire business.
- Our aim is to change the way our customers talk about Telstra.
- Creating customer advocates is a long-term focus.

Summary

We have the right strategy to take advantage of market trends.

We are on track to deliver on our 2012/13 commitments.
2013 GUIDANCE
OUTLOOK CONFIRMED

<table>
<thead>
<tr>
<th>Measure</th>
<th>FY12 ex TelstraClear</th>
<th>FY13 Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Income</td>
<td>$25.0bn</td>
<td>Low single digit growth</td>
</tr>
<tr>
<td>EBITDA</td>
<td>$10.3bn</td>
<td>Low single digit growth</td>
</tr>
<tr>
<td>Capex</td>
<td></td>
<td>~15% of sales</td>
</tr>
<tr>
<td>Free Cash Flow</td>
<td>$5.1bn</td>
<td>$4.75 – $5.25 bn</td>
</tr>
<tr>
<td>Dividend$^2</td>
<td></td>
<td>28 cps fully franked</td>
</tr>
</tbody>
</table>

1. Guidance assumes wholesale product price stability, no impairments to investments (including the foreign exchange impairment on Telstra Clear expected on completion) and excludes any proceeds on the sale of businesses and the cost of spectrum purchases
2. Dividend subject to the Board’s normal approval process for dividend declaration and there being no unexpected material events
### Capital Management Update

#### Strategic Framework

<table>
<thead>
<tr>
<th>Objectives</th>
<th>Fiscal Discipline</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Maximising Returns for Shareholders</strong></td>
<td>1. Maintain balance sheet settings consistent with a single-A credit rating</td>
</tr>
<tr>
<td></td>
<td>2. Ensure dividend remains fully-franked and seek to increase it over time. FY13 dividend will be 28c, fully-franked&lt;sup&gt;1&lt;/sup&gt;</td>
</tr>
<tr>
<td></td>
<td>3. Target medium-term capex/sales ratio ~14% subject to NBN roll-out, excluding spectrum payments</td>
</tr>
<tr>
<td></td>
<td>4. Over a full year we will not borrow to pay the dividend or fund capital returns</td>
</tr>
<tr>
<td></td>
<td>5. Maintain flexibility for portfolio management and to make strategic investments</td>
</tr>
<tr>
<td><strong>Maintaining Financial Strength</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Retain Financial Flexibility</strong></td>
<td></td>
</tr>
</tbody>
</table>

#### Principles

Excess Free Cashflow (3 years): $2 – $3 billion

---

1. Any dividend is subject to the Board’s normal approval process for dividend declaration and there being no unexpected material events.

### ADAM Internet

#### Strategic Rationale

- **Acquisition of a Low Cost, Online Sales & Support Business**
- **Buy Versus Build Decision**
- **Subject to ACCC Approval**

![Adam Internet](High Performance Internet)
NBN REPORTING UPDATE
PROGRESS OF ROLL-OUT

PROGRESS UPDATE

• Working closely with NBN Co on build of transit network: Almost a quarter of dark fibre links and 3,000 equivalent rack spaces delivered

• $321m Information Campaign & Migration Deed received: $170m recognised in FY13

• $100m Retraining Deed received: $15m recognised in FY13

• TUSMA payments commenced

• Limited PSAA and ISA payments received
NBN REPORTING UPDATE
P&L AND CASHFLOW TREATMENT

INFRASTRUTURE ACCESS

- Telstra bills NBN quarterly for access (rental) of infrastructure.
- Includes access to exchange rack spaces, dark fibre links and ducts.
- Booked as OTHER FIXED SALES REVENUE

DISCONNECTION & SALE OF LEAD-IN CONDUITS

- Disconnection payments based on number of premises disconnected.
- Sale of lead-in conduits is an asset sale to NBN Co.
- Booked as OTHER INCOME

COMMONWEALTH AGREEMENTS & OTHER GOVT POLICY COMMITMENTS

- Re-training ($100 million nominal value)
  - Received in FY12. Booked as UNEARNED REVENUE (Balance Sheet), recognised as OTHER INCOME over next 8-10 years as training expenditure incurred.
- Residual Agreement ($321m nominal value)
  - Received in FY12. Booked as UNEARNED REVENUE (Balance Sheet), to be recognised as OTHER SALES REVENUE to align with expenditure on transit network.
  - ~$60m (FY12) ~$170m (FY13) ~$90m (FY14)
- TUSMA (~$700m post tax NPV at June 2010)
  - Recognised in P&L (commences in FY13) a year before receipts and payments flow through CF statement (FY14).
  - Revenue will continue to be booked as OTHER INCOME

WINNING IN MOBILE

WARWICK BRAY, EXECUTIVE DIRECTOR MOBILES
STRONG PERFORMANCE IN FY12 FROM INVESTMENTS IN MOBILE

GROWTH IN SIOS
- 1.6m domestic mobile customers added

REVENUE & MARGIN
- $b
- 8.5% Revenue
- 8.7
- 21% EBITDA
- 3.1

PREPAID
- Branded share
- #3
- #1

CUSTOMER SERVICE
- TIO Complaints /1000 customers
- Service calls /customer
- Customer service metrics

NETWORK
- Launched LTE first
- LTE coverage to 2/3rd population by June 2013
- Network marketing

AWARDS
- "Highest in Wireless Network Quality Performance"

1. Telstra received the highest numerical score among wireless network providers in the proprietary J.D. Power Asia Pacific 2012 Australian Wireless Network Quality Performance StudySM. Study based on 1,938 total responses measuring four providers and measures opinions of wireless users about the quality of their service. Proprietary study results are based on experiences and perceptions of consumers/businesses/business users surveyed February – March 2012. Your experiences may vary. Visit jdpower.com.

MOBILE IMPORTANT TO GROWTH

Telstra Revenue by Product
- $b
- 25.1
- 25.4

1. Total Revenue
MOBILE PRIORITIES

- **IMPROVE CUSTOMER SATISFACTION**
  - Increase Advocacy
    - Call volumes and “right first time”
    - Self service (online)
    - Reduce bill shock

- **RETAIN AND GROW CUSTOMERS**
  - Why Telstra?
    - Market network advantage
    - Market customer service improvements

- **SIMPLIFY THE BUSINESS**
  - Improve Margins
    - Operating costs and SARC
    - Best practice ARPU
    - Targeted network CAPEX

- **DEVELOP NEW GROWTH BUSINESSES**
  - Growth
    - MBB
    - M2M
    - Business applications

FIVE QUESTIONS FROM INVESTORS:

1. **HOW IS ARPU EVOLVING?**
2. **HOW IS TELSTRA BEING AFFECTED BY OVER-THE-TOP PROVIDERS AND WHAT IS OUR STRATEGY TO RESPOND?**
3. **HOW ARE WE THINKING ABOUT GROWTH GIVEN THE MARKET SLOWDOWN?**
4. **TO WHAT EXTENT IS THERE GOING TO BE A RECONTRACTING CHALLENGE?**
5. **HOW IS DATA TRAFFIC GROWING AND WHAT ARE TELSTRA’S PLANS TO RESPOND?**
1. **HANDHELD ARPU IS STEADY (PRE MRO) AND MBB ARPU DECLINE IS SLOWING**

3. SPECTRUM MANAGEMENT
4. SMARTER DEVICES
5. SMART PRICING
6. MANAGING TOP 1%
7. NEW BUSINESSES
8. WIFI OFFLOAD

OUR LTE INVESTMENT WILL MORE THAN DOUBLE OUR LTE COVERAGE IN MAJOR METRO AREAS

NETWORK INVESTMENT PLANS
- $1.2 billion mobile network investment in 2013
- Another 1,000 4G base stations in 2013 and more in 2014
- Will double 4G footprint in capital cities, bringing 4G to approx two thirds of population by June 2013
- Continued investment to maintain superiority of 3G network – approx 7,000 capacity upgrades in plan for 2013
- Upgrade of the core to deliver increases in traffic

LTE 1800 ecosystem
- Over a third of international LTE networks now in 1800MHz band
- 98 LTE1800 devices now available (double January 2012)
- All leading device manufacturers now offer LTE enabled devices

1. Source: GSA, ‘Status of the global LTE1800 market’, 02/2012
ONE YEAR ON FROM THE LAUNCH OF 4G COVERAGE, WE SELL 13 4G DEVICES

CONCLUSION

- INVESTMENT RESULTED IN A STRONG 2012
- MOBILE A STRONG CONTRIBUTOR TO TELSTRA

PRICING SIMPLIFICATION
DRIVING GREATER SIMPLIFICATION OF OUR PRODUCT CONSTRUCTS

- Simplified the front of house interactions with our customers by making our support systems more informative and intuitive
- Alignment of plans and pricing with consumer shift to increased data usage
- Improved competitiveness of our product constructs whilst maintaining simplicity for customers
- Established a pricing process owner accountable for driving strategic pricing
- Offering a standardised ‘my offer summary’ for majority of consumer products

WHY ADVOCACY?

- Strategic impact: Improving customer advocacy and loyalty are essential to our strategy
- Cultural transformation: Advocacy is a key lever of our people and culture transformation
- Economic benefit: Advocates behave more profitably than detractors
WE HAVE LAUNCHED A HOLISTIC NPS PROGRAM TO LISTEN TO AND ACT ON CUSTOMER FEEDBACK

CUSTOMER FEEDBACK

› Over 30+ NPS surveys introduced, including end to end perspective on Serve processes
› ~40K pieces of feedback being received every day, including over 7K verbatim comments

BEHAVIOUR CHANGE

› Operating rhythm introduced to all our 60K staff and partners to routinely listen to and learn from customer feedback
› Over 7,000 people leaders being equipped with advocacy skills and tools during ‘Our Customer Connection’ training program
› Incentive and reward systems as well as other people processes being updated to reflect focus on customer advocacy

ADVOCACY INITIATIVES

› Key improvement initiatives being implemented across the five Serve processes
› Network investment being prioritised based on customer feedback to optimise the usage experience
› Advocacy perspective being introduced in key business areas, including product introduction, pricing and business planning

PROCESS-LED EMBEDDING CONTINUOUS IMPROVEMENT INTO OUR PROCESSES

CHANGING THE WAY CUSTOMERS TALK ABOUT TELSTRA RETAIL

REBEKAH O’FLAHERTY, EXECUTIVE DIRECTOR
TELSTRA COUNTRY WIDE

WENDY DUFF, STORE LEADER
GREENSBOROUGH
THE OMNI-CHANNEL CONSUMER HAS CHANGED THE ROLE OF THE RETAIL STORE

1. Single Channel
   - Customer experiences single touch-point
   - Only one channel offered

2. Multi-channel
   - Multiple channels acting independently
   - Channels are silos

3. Cross-channel
   - Multiple channels as part of same brand
   - Single customer view but channels deliver different experiences

4. Omni-channel
   - Customer experiences a brand, not a channel
   - Single view on customer: delivering consistent experience across channels

“Sometimes I like visiting the store, just to experience the product. Then I might buy it online later.”

**CASE STUDIES**

**WINNING IN MOBILE**
OVERVIEW
Brasserie Bread is an award-winning bakery that rose out of Sydney’s Bayswater Brasserie during the 1990s. Today it supplies artisan bread and pastries to 500 restaurants, cafes and delis in Sydney and Canberra, and a growing number in Victoria since opening in South Melbourne in late 2011.

THE PROBLEM
In 2006 the business began upgrading its facilities to meet the food safety requirements of HACCP (Hazard Analysis and Critical Control Points), a systematic preventative approach to food safety.

The Sydney bakery was HACCP certified in June 2007, and the Melbourne bakery certified at launch in October 2011. But complying with the HACCP requirements is time consuming. Co-Director and head baker Michael Klausen says his team used to spend up to seven hours each week manually recording coolroom temperatures for HACCP reports.

In addition to the compliance requirement, accurate temperature monitoring is crucial for stock control: a single coolroom failure could cost up to $10,000 in lost stock.

THE SOLUTION
In 2004 David James joined as a partner, bringing his IT expertise to Brasserie Bread’s processes. James and Klausen knew they wanted to apply what they call ‘the black box’ principle to dough and coolroom temperature management, which meant automating data collection to produce real-time reports and comply with the stringent HACCP requirements.

Launching the Melbourne bakery presented the additional challenge that Klausen and James couldn’t be in two places at once.

But a solution presented itself two doors down from their new Melbourne operation. Greg Blampied, an early Brasserie Bread customer and employee of Cooltrax Asia Pacific, recommended they install Cooltrax Universal Monitoring Devices in both bakeries.

This M2M solution provides remote access to real-time temperature data and includes the Telstra Wireless M2M Control Centre™ platform for managing wireless SIM connections.

Wireless temperature tags inserted into batches of dough and installed in coolrooms now automatically transmit data via radio frequency to the monitoring devices. In turn, the monitoring devices use Telstra’s Next G™ network to transfer data to the Cooltrax cloud-based service.

Brasserie Bread’s team now has 24/7 visibility of all coolrooms and the dough stored in both bakeries – they simply need to access the cloud service with a secure login on any web-enabled device.

Crucially, any temperature fluctuation or device failure triggers automatic email and text alerts to bakery and production managers.

M2M HELPS BAKERS PROTECT THE QUALITY OF THEIR DOUGH
TELSTRA CONTROL CENTRE PUTS PROCON IN THE DRIVER’S SEAT

COMPANY PROFILE
ProconTelematics is the Australian affiliate of ProconMRM Inc., the world’s leading provider of reliable Mobile Resource Management (MRM). At the core of their product is a small telemetric unit containing a GPS chip, antenna and Telstra Next G® SIM card.

Tim Bos, co-founder of ProconTelematics, says: “Globally we monitor over one million vehicles – vans, trucks and other mobile resources and assets. We’re also the world’s leading provider of tracking to the auto finance industry – tracking vehicles that are under a high-risk finance arrangement.”

But it’s more than just vehicles. A Victorian industrial complex was the victim of more than 20 robberies in a short period. One factory owner installed a ProconTelematics tracker in a toolbox, which was then stolen. The device identified the location of the thieves allowing police to obtain search warrants, recover a vast quantity of stolen goods and make multiple arrests.

BUSINESS SITUATION
Clearly, coverage and reliability of the ProconTelematics device is critical to their ongoing relationship with their customers.

“We had a lot of pressure from our clients to move to the Next G® network,” Tim Bos continues: “They’ve definitely seen the benefits of the network switch over. It’s obviously a higher level of coverage and the reliability of the network.”

But there were major issues as well. “Our invoices from Telstra were sent to us in boxes. I think our latest one was about 600 pages long,” Tim Bos explains they also had to “call up Telstra to go through a long process to manage SIM cards.”

TECHNICAL SITUATION
ProconMRM in the United States were already using a Control Centre based on the Jasper operating system for managing their mobile devices. They were provisioning large numbers of devices on-site and enjoying economies of scale.

Tim Bos elaborates: “As soon as they came to us and said they’ve got this new Control Centre and would we like to be one of the early adopters, we just jumped immediately on that. And considering the fact that it was the same as we implemented in the U.S. the time for us to actually provision and get the devices ready took about two months maximum.”

SOLUTION
The new Telstra Control Centre platform has given ProconTelematics immediate integration of their Australian and USA operations.

Tim Bos is delighted: “From an integration perspective it made it really straight-forward for us and easier to manage our SIM card through our user phases and keep prices down. It’s a huge cost saving for us because we don’t have to hire the six or seven people they have in the United States.”

Administration is now done via mobile and web interface, and the Next G® network means their customers can keep track of their assets more and in more places. Plus, in Tim Bos’s words: “The advantage of the Telstra 24/7 support to us is that we can offer our clients, and be confident in offering our clients, SLAs (Service Level Agreements).”

RESULTS
Since ProconTelematics have been operating the Control Centre, the savings have been considerable. “I’d put it at about eighty thousand a year. Obviously that will grow substantially as we grow in the marketplace,” Tim Bos explains. The Control Centre will help ProconTelematics meet their “very, very aggressive growth path in Australia.”

WHY CHOOSE TELSTRA?
Coverage and reliability are critical in any machine-to-machine communications – and the Telstra Next G® network gives you the best of both. Plus our new Control Centre offering reduces administration, improves efficiency and ultimately saves cashflow.

Tim Bos is impressed: “What Telstra have done is taken a best-of-breed system that’s used in heaps of countries overseas and introduced it under a Telstra banner in Australia. So going in there’s a huge amount of confidence.”

M2M PUTS FARMERS IN CONTROL

THE PROBLEM
Gilgai Farms is a producer of quality grass-fed beef and sheep meats, located 35 kilometres east of Dubbo in Central Western NSW. Comprising seven adjoining properties with nearly 6000 head of stock on 2700 hectares, the business has 44km of pipeline linking 100 watering points.

The vital work of driving around to monitor and manage water resources was taking up to two hours a day, adding to an already hectic work schedule for the father and son farmers, Eric and Luke Harvey. They wanted a way to have less stress in their life and use the time required to measure water to build the business or spend it with their family.

THE SOLUTION
Gilgai Farms took on Observant® as a service and technology partner. Observant recommended a machine-to-machine solution (M2M) which incorporated its cloud-based Observant Global™ service and Telstra’s Wireless M2M Control Centre.

Observant placed monitoring units at Gilgai to capture water usage and remote cameras to capture images of their stock movement. The images and data are then transferred to Observant Global’s management application over the Telstra Next G Network® through the Wireless M2M Control Centre, which the Harvey’s can then access online 24/7 via a web browser on their iPad, smartphone or PC.

The Observant Global platform and Telstra M2M Control Centre also sends alerts via the Next G® network to the Harvey’s via SMS and email if trough water level falls below predetermined levels.

The Telstra Wireless Control Centre also allows Observant to order, provision and activate services remotely, oversee operation of the SIM (housed within the monitoring unit), undertake diagnosis in the event of any connectivity failure and simplify reporting.

THE RESULTS
Gilgai Farms immediately saved 14 hours a week on daily 30km water runs, allowing management to focus on other important areas of the business.

These dramatic reductions in travel have saved Gilgai Farms thousands of dollars in fuel and labour. Earlier detection of water leaks or damage is also now possible with the Observant Global solution.

The data collected is also being used in business planning; less time spent in the field means the $19,000 investment Gilgai Farms made in remote monitoring and management paid for itself in 10 months.

The farm operators have peace of mind and more time to spend on growing the business and are enjoying better work-life balance.
Raising the best grass-fed beef and sheep is all about taking stress out of their environment. Gilgai Farms has sustainability at the heart of its operation so delivering quality, tasty and nutrient dense meat direct to the consumer is a point of pride.

Reducing the hassle in managing the operations of a large farming spread can be a bigger challenge. Eric and Luke Harvey are the father-and-son operators of award-winning Gilgai Farms, a producer of quality grass-fed beef and sheep meats, located 35 kilometres east of Dubbo in Central Western NSW.

Managing Director Eric Harvey said: “We believe that our produce has more taste, better texture and is more tender because our livestock are stress-free,” Gilgai Farms spans 2700 hectares over seven adjoining properties. Its 100 watering points support almost 6000 head of stock and are linked by 44km of pipes.

Ensuring stock are adequately watered is mandatory, but Eric and Operations Manager Luke were spending up to two hours a day monitoring and managing water levels in the troughs and rainfall in different catchments.

It was a 30km round trip just to fill troughs nightly and the Harveys wished their travel time could be used more productively.

“Our Board of Directors identified Observant as the technology partner with a machine-to-machine (M2M) solution to make our water monitoring and management more efficient,” Eric said.

Observant recommended its Observant Global ™ service to reduce the manual effort required to monitor and control watering points and the pipeline. The Observant Global service was supported by the Telstra Wireless M2M Control Centre.

The undulating local topography means any remote monitoring system needs great network connectivity.

Telstra’s world class Next G® network links the Observant Global service units back to their operations.

Having 24/7 visibility of their SIM connections through the Telstra Wireless M2M Control Centre means Observant can quickly identify network or connectivity issues. Their solution also gathers data about water management and efficiency, enabling Eric and Luke to plan ahead.

If a trough water level falls below predetermined levels, data is sent via Next G to Observant Global’s cloud-based management platform. Observant in turns sends an alert to the property managers via email or SMS. Remote cameras send regularly updated images of stock to Observant Global so the managers can monitor their movements online via a web browser on their iPad, smartphone or PC.

It’s this automated and remote ‘magic’ that Observant relies on to provide a solution that is reliable and affordable to its customers.

The Harveys save up to 14 hours a week on visits to watering sites. That time is being put back into the business so Eric and Luke can focus on the health of their land and livestock, diversify into new produce and be with their family.

Allowing for wages, fuel costs and wear and tear, the payback on Gilgai Farms’ $19,000 hardware investment was just 10 months. The system’s operating costs come on one convenient bill.

“If I now have the time to progress the business in new ways without working 18–20 hour days,” says Eric. “It’s not just about cost savings - we have great peace of mind knowing M2M Control Centre, Next G and Observant Global will keep us on top of our business.”

"DELIVERY IMPROVEMENTS HAVE HELPED US REDUCE DELIVERY FREIGHT COSTS FROM 7% TO 5% OF OUR TOTAL EXPENDITURE. THAT’S A SAVING OF $880,000 P.A."

Andrew Snowdon, Chief Financial Officer, Reid Stockfeeds

Reid Stockfeeds has been supplying mixed feed to Victoria’s dairy, poultry and pig farms for 25 years. The company now turns over $44 million p.a. and is still growing. Reids recently ran a supply chain benchmarking exercise and discovered they were losing money on freight costs. After investigating several solutions, they settled on a Navman Wireless tracking solution from Telstra. Andrew Snowdon, CFO, is extremely happy with the results.
THE BEST ROUTE INTO THE FUTURE

Try keeping on top of farms, feeds, trucks and loads
With some 800 individual farm customers, the team at Reid Stockfeeds needs to manage masses of small deliveries, from trucks that have different capacities and different abilities to deliver loads from their separate onboard compartments. It was never going to be easy.

“Our Production Manager wants to ensure that compartments are filled in the proper order so drivers don’t need to backtrack to get the correct feed to the correct farm,” explains CFO Andrew Snowdon.

“Navman Wireless from Telstra has helped us meet these goals because we have each farm plotted on the OnlineAVL2. By seeing where the farms are, we can fill each truck in order of delivery and send our drivers on the best route.”

Nothing beats being able to see the future as well as the past
With Navman Wireless from Telstra, staff at the mills can use OnlineAVL2 to monitor inbound trucks. As Snowdon tells it:

“There’s no more guesswork when it comes to deciding what feed to mix. Now we see a truck heading back to the mill and prepare the correct feed for that driver’s next delivery.

It’s helped us reduce delivery freight costs from seven to five per cent of our total income. If our turnover is $44 million, that two percent equals a saving of $880,000 p.a.”

The company’s using their Navman Wireless system from Telstra to record data like distances travelled, time taken, speeds, discharge times and more. It creates a very accurate picture of the whole supply chain. Andrew Snowdon recalls that it didn’t take long to catch on.

“At first our drivers were suspicious of the tracking devices,” he says, “but now they’re fine and appreciate that they don’t have to do runsheets anymore. No more trampled bits of paper, no more bad handwriting to read, everyone is happy.”

From strength to strength to strength
Reid Stockfeeds is built on customer service – and their promise to get feed to the customer’s farm any way they can. Having the Navman Wireless system from Telstra lets them go beyond reliability and be extremely precise as well. “We’ve had customers call to check an ETA and instead of calling the driver, we look on OnlineAVL2 and tell the customer exactly where the truck is,” says Snowdon.

“If a customer questions whether we made a delivery, we can show them exactly when our truck arrived and left their farm.”

Plus, with every delivery address mapped on the OnlineAVL2, it’s easy for Reid Stockfeeds to spot customer concentrations and develop marketing strategies accordingly.

There’s also been another, unexpected benefit when it comes to fielding public complaints about Reid Stockfeeds driver behaviour. “Before we had tracking…we had to take the word of the caller,” Snowdon remembers. “Today, we can retrieve the driver’s speed for any particular time and relay this information. In every case, we’ve always been satisfied with our drivers and they appreciate the support.”

NAVMAN WIRELESS SOLUTION FROM TELSTRA IS BRINGING REID STOCKFEEDS:

• A 28% reduction in overall freight costs, worth around $880,000 p.a.
• Better delivery efficiency
• Automated runsheets and fewer driver discrepancies
• Improved customer service

“NAVMAN WIRELESS FROM TELSTRA PROVIDES US WITH EXTREMELY VALUABLE DATA. WE’RE COMING CLOSER TO WORLD’S BEST PRACTICE FOR FREIGHT COSTS, SUPPORTING OUR DRIVERS AND KEEPING OUR CUSTOMER SERVICE PROMISES.”
Andrew Snowdon, Chief Financial Officer, Reid Stockfeeds

We have full control of where everyone is. Better productivity, better time management, a more efficient team. It all starts with the Navman Wireless System from Telstra.

Sebastian Galizia, Quality Engineer, Azzona Drainage Contractors

Azzona Drainage is an independent contracting firm operating in Melbourne’s northern and western suburbs. Having built a strong reputation for service and integrity, Azzona was looking for better ways of knowing where their trucks were, where they were going, and how long they were spending on site. Within months of installing a Navman Wireless tracking solution from Telstra the business had noticed substantial overtime savings, productivity increases and fuel cost savings.
Seeing the savings within four months
Azzona Drainage Contractors’ Quality Engineer, Sebastian Galizia, could identify a number of benefits and savings within just four months of installing their Navman Wireless system from Telstra. For a start, he schedules jobs on a daily and weekly basis, so the Navman Wireless system is helping him schedule more efficiently.

"Now that I know exactly how long it takes a truck to get from A to B," he explains, "I can calculate travel time more accurately. I don't have to make lots of phone calls to find out where the guys are and they can just get on with their work."

Business with a better sense of direction
That’s led to some immediate savings. The accuracy and efficiency of navigating with the Navman Wireless from Telstra has also helped Azzona lower their fuel costs by around $2,000 a month.

"The guys simply aren't driving as much to get to sites," reports Galizia. "We’ve set Geofences around specific sites so we know when they enter and leave jobs."

The company also noticed a near-instant reduction in overtime claims. With the Navman Wireless solution from Telstra tracking exactly when each truck enters and leaves a site, timesheets are now filled from the system record instead of each driver’s memory. So timesheets have become much more accurate – making a difference that’s worth almost $100,000 p.a.

Improvements in vehicle management and maintenance
Galizia has also been making the most of the reports and other features he can access with his Navman Wireless solution from Telstra. These include speed reports, for monitoring driver professionalism, checking time on site, and using automated vehicle maintenance scheduling.

"I'm not at my desk all the time, Galizia explains, “so I appreciate that the system sends me an email when a vehicles enters a Geofenced area.”

"I've also recorded each truck’s maintenance requirements," he continues. “Each time a truck travels 10,000 kilometers, Navman Wireless from Telstra emails me so I can book the service. We used to miss due dates all the time. Now we’re saving money on repair costs.”

It’s a system that works hard – wherever you put it
The integrated Navman Wireless solution from Telstra has been well-accepted by Azzona’s management, project foremen and contractors. “We have installed OnlineAVL2 on our computers in our office,” Galizia enthuses. “I use it every day to set up and timeline jobs, see where the guys are and run reports – it’s very easy to use. Now I can get the guys to their jobs by the most direct route.”

NAVMAN WIRELESS SOLUTION FROM TELSTRA IS BRINGING AZZONA DRAINAGE:

• Timesheet savings of half an hour a day, or $100,000 p.a.
• Savings of two to three days per job through increased productivity
• Fuel savings of 11% across the fleet
• Better fleet control and visibility

"WE'RE SAVING $2,000 PER WEEK IN OVERTIME AND TWO–THREE DAYS ON JOBS OVERALL DUE TO THE VISIBILITY NAVMAN WIRELESS FROM TELSTRA OFFERS."
Sebastian Galizia, Quality Engineer, Azzona Drainage Contractors
VIRTUAL BRAIN KEEPS TOP-END WAGONS SAFE AND SECURE

THE PROBLEM

Eurowagon Australia sells rugged mobile wagons that provide mining and engineering companies with mobile offices, accommodation and amenity units in some of Australia's most remote locations.

With some of the wagons worth $100,000 or more, it was important for both Eurowagon and the purchasers of the vehicles to be able to monitor their mobile assets both while in transit and onsite.

GRIDTRAQ Vehicle Tracking and Fleet Management Australia was asked to design a machine-to-machine (M2M) solution to monitor and control systems in mobile wagons sold by Eurowagon. The solution had to provide Eurowagon and the wagon owner with operational visibility regarding their location whenever they wanted, while also providing alerts on any events that mattered to them, such as maintenance and security issues.

THE SOLUTION

GRIDTRAQ Vehicle Tracking and Fleet Management Australia developed its purpose built GRIDTRAQ ASSETRAQ remote monitoring and control solution and integrated it to work with the wagons' on-board sensors.

To carry the data from the wagon to GRIDTRAQ's comprehensive online web portal, hosted at their 'A' Grade server in Port Melbourne, Victoria, they partnered with Telstra to incorporate the Wireless M2M Control Centre solution. Telstra's M2M Control Centre uses Telstra's world-class Next G® network, covering more land area than any other wireless network carrier in Australia.

Using the online platform, owners and Eurowagon can set up alerts from ASSETRAQ on the events that matter to them most when in transit or on location. This could include when and how the wagon is being towed, if water tanks need to be replenished, if there has been a security breech or when a part needs replacing, tyres need rotating or a service is required.

THE RESULTS

Thanks to the Telstra M2M Control Centre, the GRIDTRAQ ASSETRAQ solution can remotely monitor the wagons and ‘talk’ back to the customers and Eurowagon via the GRIDTRAQ Web Portal without human intervention. Using the M2M Control Centre platform enables both the owner and Eurowagon to check data around the clock and receive alerts when the wagon is in a Telstra network coverage area.

For Eurowagon’s customers, this means that can have peace-of-mind that their wagon is secure and know exactly when it’s time for an on-site service, instead of having to make unnecessary service trips, which can prove expensive. As a result, some owners are reporting savings of up to 15 per cent on travel time, wear and tear on tyres and insurance. This can equate to $40,000 over the life of a service vehicle. The monitoring system is also used by Eurowagon to ensure the wagon is being used in line with their warranty policy.
GRIDTRAQ, the Telematics Division of Melbourne company Directed Electronics Australia, operate more than 60,000 SIM cards throughout Australia and South Africa, mainly in machine-to-machine (M2M) applications for fleet management logistics and vehicle security. Customers range from large fleet vehicle to suburban owner operators like plumbers.

As they are at the cutting edge of telematics, GRIDTRAQ was the first company mobile wagon importer Eurowagon Australia turned to for a solution to give them and their customers greater control and visibility of their wagons when in transit or on-site.

Eurowagon's self-contained wagons are used by some of Australia's biggest mining and construction companies at remote sites. They are close to a complete solution when it comes to portable amenities, with configurations for accommodation, toilet and bathroom blocks and onsite offices.

With some wagons worth $100,000 or more, monitoring time spent on-site, safe towing in transit and the status of onboard systems were prerequisites for the customer and Eurowagon alike. For the Eurowagon owners, knowing their mobile assets are safe, secure and being maintained to the highest standard is critical.

GRIDTRAQ Business Development Manager Dylan Hartley said: "These wagons were already sophisticated and robust pieces of engineering excellence. This was like being asked to create an intelligent hub or brain that allowed the operator to connect remotely to the vehicle.

“They are towed in and out of sites by four-wheel drives, often over rugged terrain, and they can operate in some unforgiving climates. Their specialised nature and facilities means that they need regular service.

“For example, if a generator runs low on fuel or an ablution unit needs water or siphoning, the owner needs to know.

“Sending a service vehicle can mean an arduous and expensive round trip. Accurate and reliable monitoring that doesn't add to on-site staff workload is a must.”

GRIDTRAQ recommended the purpose-built GRIDTRAQ ASSETRAQ remote monitoring and control solution. Its in-house R & D team built an application to integrate it with existing onboard sensors. Telstra's Wireless M2M Control Centre was put forward to manage the connectivity services supporting the solution. M2M Control Centre uses Telstra’s world-class Next G ® network, which covers more land area than any other wireless network carrier in Australia. This is crucial in remote solutions such as ASSETRAQ.

The M2M Control Centre carries up-to-the minute data to GRIDTRAQ's comprehensive online web portal - hosted at GRIDTRAQ's 'A' Grade server in Port Melbourne, Victoria. Owners and Eurowagon can choose to receive specific trigger alerts from ASSETRAQ on key events.

This could include when and how the wagon is being towed, if water tanks need to be replenished, if there has been a security breach or when a part needs replacing, tyres need rotating or a full service is required.

“Eurowagon's customers have peace-of-mind that their asset is secure and that they know exactly when it’s time to despatch a service - because their wagons tell them,” Dylan said.

“Not only are they maintaining a safer working environment, they're reporting savings of up to 15 per cent on travel time, wear and tear on tyres and insurance. This can equate to $40,000 over the life of a service vehicle.”

™ and ® are trade marks and registered trade marks of Telstra Corporation Limited ABN 33 051 775 556.
OVERVIEW

Move Yourself Trailer and Ute Hire has innovated trailer hire since Bill Cowie established his first depot in 1974, at the BP Pooraka service station in South Australia. In 2002 Move Yourself pioneered self-service kiosks for trailer hire, which reduced the load for service station attendants, and it continues to streamline its hire process. The business now operates from more than 1,000 locations in Australia, from Sandy Bay in Tasmania to Durack in the Northern Territory.

THE PROBLEM

When Move Yourself began installing self-service kiosks into service stations, the rapid rise in demand brought a new set of challenges.

Back in 2002 the only way to connect the kiosks to head office was via a dial-up data connection on a landline. As well as taking up to several weeks to install, landlines were expensive. Cowie calculated that if he wanted to link 1,000 locations to meet demand, he’d be facing a bill of around $39,000 every month.

Cowie knew there had to be a better way to deploy and manage new kiosks.

Firstly, he wanted to cut the delay between signing up a new location and having the kiosk fully operational. Secondly, he needed to make it easier for his team to reconcile hire data.

THE SOLUTION

Ever the innovator, Cowie explored several wireless communications options and by 2011 had narrowed his choice to a mobile SIM-based system, linking the trailers and kiosks to his servers. Move Yourself’s solution had to match reliable mobile coverage and service with reasonable cost control.

“We chose Telstra because the Next G network offers the most reliable connection and most of all, the Telstra M2M Control Centre gives us control of our plan,” explains Cowie, “Cost was a big factor and Telstra had the best deal.”

Cowie’s team also developed a hire tracking application that works with the Telstra M2M Control Centre to deliver up-to-date vehicle status and revenue reports.

BUSINESS BENEFITS

Cowie says going wireless was one of the best decisions he’s made for his business. “We no longer need to install phone lines – which used to take weeks – and we save a great deal of money just on not having the rental on landlines. With 1,000 sites on dial-up we would be spending $39,000 every month just in landline fees compared to $5,000 per month with M2M – that’s a saving of $408,000 per year. We also no longer need to dial in to our kiosks. These days, through the M2M system controlled from our home base, all kiosks are connected to our main server on our own private network so any changes are automatically updated.”

M2M HELPS TRACK AND MANAGE TRAILER AND UTE HIRES ACROSS THE COUNTRY
Move Yourself Trailer and Ute Hire can now rapidly deploy kiosks to new sites, and surpassed its 1,000 location target in early 2012.

Cowie’s technicians build, test and package new hire kiosks ready to go from the organisation’s headquarters in South Australia, using the Telstra M2M Control Centre to provision and activate or deactivate SIM cards themselves.

“The big efficiency gain has been the control of the SIM cards and the Next G connection,” Cowie declares, adding that this rapid deployment made possible by the M2M platform means Move Yourself can more efficiently deliver new kiosks to its agents on time.

With the kiosks connected via the Next G® network, Cowie has achieved his goal of delivering a self-contained system. Customers complete the contract themselves at the kiosk, including scanning their driver’s licence and learning about their legal and safety obligations. Service station attendants no longer need to manually fill out contracts or leave the cash register to unlock trailers. Finally, month-end reconciliation at each site is automatically calculated within the hire management system developed inhouse.

While the kiosks themselves require a site visit by a technician for hardware maintenance, the software updates, consolidation of hire data and monitoring of SIMs are now all handled remotely on the M2M platform via the high-speed Next G network.

According to Cowie, the Telstra Wireless M2M Control Centre simplifies control of the full fleet of SIMs in the kiosks: “Telstra M2M has given us a great advantage because we can check the usage from any or all SIM cards day or night.

“I’ve had computers that have gone haywire and have been sucking up all sorts of data – the good thing is that you can jump on the problem there and then, and fix it before it runs up huge bills. It’s a fantastic system.”

Cowie was so impressed by the reliability of the Next G network and the SIM monitoring capabilities of the M2M platform, he now includes Telstra Next G SIMs in a vehicle tracking system called ViperTrak, which was developed by another transport business he owns. ViperTrak devices monitor vehicle locations and usage such as speed and distance, as well as giving owners an option to send messages to vehicles for remote locking/unlocking and ignition termination.

A critical measure of any innovation is whether it consistently delivers a better customer experience – and Cowie takes great pride in pioneering a self-service trailer hire system that is fast and efficient.

Marketing material for Move Yourself cites reliable high-speed data transfer as a serious competitive advantage: “Our system runs on a private secure Access Point Name (APN) over the Next G network on Telstra infrastructure and as such we are assured large bandwidth and less chance of congestion in the busy times.”

“The overall view of our company’s performance is thanks to Telstra M2M technology,” adds Cowie. “Our system has all the facts, movements and performance of all our products and agents by the minute; and because our kiosks inform our customers of their safety obligations, we help make the roads safer.

“Today we operate with confidence that we have achieved a national trailer hire company with control, an efficient booking office, high-quality products and a quick and easy hiring process, thanks to Telstra’s Next G and M2M.”

BUSINESS BENEFITS

As the M2M system transmits the temperature of the unit and its product in five-minute intervals, Brasserie Bread has cut the risk of human error in monitoring and reporting dough and coolroom temperatures.

“...A lot of bakers still work the old-fashioned way, checking the temperature on fridges twice a day,” explains Klausen. “It could look perfect at 9am and 5pm, but during the day it could be completely out of whack and the food could be damaged. So having it measured more frequently is the better way of doing it.”

Klausen regularly logs into the system from his iPad or smartphone to check how the fridges are operating. On-demand data transmissions, from both Sydney and Melbourne, mean he can spot and react to problems immediately, and this has the flow-on effect of reducing energy and maintenance bills.

“If I see a fridge isn’t working properly I can book the maintenance guy before it actually damages the motors, saving a lot of money. At the level we operate, we have very high demands on quality and consistency, so it’s imperative we follow processes strictly.”

Blampied explains that many of Cooltrax’s food industry clients are all too familiar with the worst-case scenario of a HACCP auditor turning up in the middle of a fridge defrost cycle.

“When an auditor visits they immediately want access to your records – they don’t want excuses. Several clients have mentioned that frequent reporting intervals help improve their audit results. If an auditor measures the temperature of a unit when it is in the middle of a defrost cycle our records can prove that is the case, removing any doubt from the auditor’s mind that the fridge is not running correctly.”

Accurate performance data can also help businesses track the total cost of equipment ownership, from installation to running and maintenance costs. That can also help them decide on future purchases.

It takes three days to make a loaf of Brasserie Bread’s organic sourdough using its 16 year old ‘starter’, which is a naturally occurring wild yeast.

Tags directly placed in the dough update the bakers on the status of this living product. Another benefit of having temperature data transmitted continuously into the cloud is that Brasserie Bread’s team can monitor seasonal changes in the dough’s behaviour, even when they’re not onsite.

Klausen says the wireless connection from the dough to the monitoring device and then across the Next G network to the cloud eliminates the need for manual monitoring.

“How now can we see it all live on our computer screens,” explains Klausen, “From the core temperature of the dough to the settings on the fridge.”

Blampied muses that Klausen is both an artist and a commercial baker: “Michael uses good quality product and traditional methods when preparing his breads and pastries, and he also has his eyes open for new technology.

“He uses the best of both worlds, old and new. Because he does not use additives or artificial enhancers he needs to be more aware of temperature, that’s where we come in.

“We use the Telstra SIMs in the Universal Monitoring Devices to communicate all data back to our servers. The great advantage is Telstra’s coverage. This is great peace of mind for companies with temperature sensitive products because Telstra’s network coverage is very thorough.”

ABC PHOTOSIGNS KEEPS ITS FLEET IN THE PICTURE WITH MOBILE BROADBAND TABLETS

THE PROBLEM
Real estate signage and promotional company ABC Photosigns had a fleet of more than 50 drivers on the road nationally, erecting 100,000 mini-billboards a year. Time spent recording installations and following up with clients took drivers off the road and was squeezing productivity and profit margins.

ABC Photosigns wanted a system that would make its fleet more efficient and give drivers and their customers a competitive edge.

THE SOLUTION
ABC Photosigns spoke to Telstra Business and decided to roll out 45 camera-equipped Samsung Galaxy seven-inch tablets using Telstra Mobile Broadband®.

ABC Photosigns developed an Android app to process photos of installations and e-mail them to clients as attachments while drivers are on the road.

THE RESULTS
If clients need adjustments to signage, they can tell drivers before they return to their office. ABC Photosigns estimate its drivers are able to spend up to 20 per cent more time on their core job of installing and removing boards.

ABC Photosigns says customer satisfaction has risen. The business can grow by another 15 per cent before it needs to employ more staff.
Real Estate Agent Gets Mobile to Keep Pace with Mining Boom

Outback WA Pilbara town Port Hedland boasts a permanent population of just 14,000, but it punches way above its weight for the Australian economy as a major transport hub of iron ore.

And competition for housing is blistering!

In the next five years, Port Hedland’s housing stock of 6,000 is set to double to cater for the growing number of FIFO (fly in fly out) and local workers. Local real estate agents are at the heart of the action.

Jan Ford Real Estate (JFRE) owner Jan Ford says her business, like her hometown, has been on a massive growth trajectory with sales doubling over the past year.

Key to her success has been JFRE’s adoption of mobile technology - tablets and smartphones - powered by Telstra’s Next G® Mobile network.

These devices have helped JFRE slash processing times by more than 90 per cent.

“At any given time 50 per cent of my staff are on the road - inspecting a property for sale, attending inspections, co-ordinating maintenance, or seeking approvals from landlords – it’s an endless task list,” Jan said.

“Through mobile technology we can quickly take our sales properties to market and turn around rental properties to meet tenancy demands. Where once representatives aspired to a sale a month, they can now aspire to a sale a week.”

In real estate, a picture still paints a thousand words, and for a business with a 70 per cent focus on property management for local, interstate and overseas owners, accessing detailed pictures is pivotal.

“Whether a property is for sale or rent, we use tablets to take pictures of it and send it immediately to our database. Previously we had a lengthy process of taking photos on a camera, getting them processed and then spending at least five minutes calling all prospective customers,” she said.

“Tablets are great because they’re big but light and hard to lose while on the road. When viewing photos, we don’t have to squint to see the detail on signs or on damage to a property. We’re also not limited in the use of apps, for example we use one where we can add detailed notes to our photos for tradesmen so they can order the right supplies then and there.

“Our record keeping has also improved greatly, and in the case of property management, we can easily keep track of what a garden looks like year on year.”

Being at the front end of mobile technology has positioned JFRE well for the town’s expected real estate expansion as large mining concerns pump $30 billion into the Port’s infrastructure.

“Our mobile technology allows us to adopt rapid response strategies and that is exactly what’s needed in this market,” Jan said.
TELSTRA KEEPING SMALL BUSINESSES CONNECTED

THE PROBLEM
Businesses in locations without fixed ADSL, cable or fibre broadband connectivity, resort to either dial up Internet, satellite or mobile broadband to keep their businesses connected. Depending on the location of each business, this can cause frustrations surrounding frequent drop outs, slow internet connectivity and complicated external antenna set ups.

THE SOLUTION
The Telstra Outdoor Gateway has been designed to extend a reliable high speed broadband connection to businesses using the coverage, reach and speed of Telstra’s Next G® network. As an all-in-one product, the Outdoor Gateway can be used as a primary broadband connectivity device, a backup device, a temporary device or it can be used for a mobile office set up.

BRIDGING THE BROADBAND GAP
Lifestyle Music produces a diverse variety of non-traditional music covering genres such as Australiana, chill out, spa, ambient jazz, indigenous, nature and meditation. Their specialised music designers create unique sounds for events, advertising, wellbeing and much more. Customers and retailers can listen to various sound tracks via the Lifestyle Music website which features music samples, online audio displays and digital downloads; while also supporting online sales transactions, inventory management and Internet marketing.

Maintaining a solid broadband Internet connection is critical for e-commerce businesses and while this is easily achieved in urban areas, Lifestyle Music's remote location on the outskirts of Cairns presented a number of connectivity challenges. As a business based beyond the reach of fixed line ADSL or cable infrastructure, mobile broadband connectivity was the only available option – but their distance from the nearest Next G® tower made it difficult to access a 3G signal with the strength to support bandwidth-intensive devices and applications.

To overcome the issue of a degraded signal and slow wireless Internet speeds, Lifestyle Music tried to bolster their 3G signal by connecting an external antenna to a regular 3G router. A switch was attached to the router to create a wired network for their four desktop PCs; and a separate Wi-Fi router was used to create a Wi-Fi hotspot within the premises. This motley mix of technologies failed to eliminate low signal strength and loss of signal difficulties and left Lifestyle Music susceptible to a number of potential maintenance issues.

Sue Itzstein, General Manager of Lifestyle Music, required a solution that could both optimise their signal and reduce device clutter. Being an e-business located in a remote location, the all-in-one Telstra Outdoor Gateway was the ideal choice. The durable weatherproof Outdoor Gateway worked straight out of the box with no configuration or user interface setup requirements. Once the relevant cables were connected, Sue achieved an instant high-speed mobile broadband connection with the capacity to support up to 16 wireless devices and 3 wired devices. A tradesman then quickly and easily mounted the compact device onto an eave in an optimal position.

"Being an outdoor device with integrated antennas, we have substantially increased our Telstra Next G® network signal strength, and we now have reliable Wi-Fi inside and outside our premises. The gateway is also attached to the Indoor Access Point that connects all of our office desk top computers so everything's connected," said Sue Itzstein, General Manager of Lifestyle Music.
“Since installing the Gateway, we no longer have to experience prolonged disconnection periods, drop outs or slow connectivity. This has therefore helped me keep my business operating more efficiently.”

The Telstra Outdoor Gateway incorporates: a secure and reliable Wi-Fi router with high gain antennas that connects to the nearest Next G® tower. Typical download speeds range from 1.1Mbps and 20Mbps in all capital cities and many metropolitan and regional areas as and high gain antennas for a solid connection to the nearest Next G® tower; reliable and secure Wi-Fi coverage; an integrated Wireless LAN access point and MIMO antenna technology to transmit a strong signal around the premises, up to 100m for convenient indoor and outdoor wireless Internet access and wired connectivity powered via Ethernet to support video and music streaming, multimedia downloads and other high-bandwidth activities without disruption.

Lifestyle Music was able to achieve all of their connectivity requirements using a single robust device with industrial strength IP-67 rated housing for the protection needed to withstand extreme weather conditions experienced in Cairns and its surrounds.

**BENEFITS:**

- Connects remote businesses to high-speed broadband
- Boosts Next G® signal strength
- Ideal for customers in areas where ADSL and Cable broadband isn’t available
- Provides up to 100m outdoor Wi-Fi connectivity and 30m indoor
- Creates 3 secure WiFi networks connecting up to 16 Wi-Fi devices
- Ethernet connectivity for 3 wired devices
- Withstands dust, rain and extreme temperatures

**THINGS YOU NEED TO KNOW:**

Capital CBD’s means within 5km from the GPO in each capital city. Outside these selected areas, the remaining metropolitan areas of all capitals cities and many other regional and rural locations support typical download speeds from 550kbps to 8Mbps. In other coverage areas, typical download speeds are from 550kbps to 3Mbps. Typical upload speeds are from 300kbps to 3Mbps in capital CBDs and selected regional areas. In other coverage areas, typical upload speeds are from 300kbps to 1Mbps.

Actual speeds vary due to factors such as distance from the base station, local terrain, user numbers, hardware & software configuration and download source/upload destination. Actual download speeds will be shared between users.

Visit telstra.com/mobilebbcoverage for details of coverage locations.

NO PAPER TRAIL IN THE AUDIT PROCESS
AS ACCOUNTANTS GO MOBILE

Using mobile technology to improve customer service, satisfaction and referrals adds up. And one accounting firm has the numbers to prove it.

NSW Central Coast accountants Bishop Collins credits savings of up to $90,000 a year to the use of smartphones and tablets - powered by Telstra’s Next G® Mobile Broadband network.

Bishop Collins audit team specialises in the Not for Profit, Registered Club and Retirement sectors. Its tax team specialises in ensuring their clients have the best asset protection strategies and tax efficient business structures for their type of operations.

According to partner David McClelland, mobile technology allows Bishop Collins to deliver - and deliver fast on their customer service proposition.

“It used to be you’d go out to the client and hope you had everything in multiple bags in the back of the car. If you left something behind, there would be quite a delay,” David said.

“Now I can download voluminous technical standards and legislation from sites like the ATO, and spreadsheets and other chunky business documents on a Tablet connected to the Telstra Next G network.”

According to David, clients also need answers quickly, for example to finalise a purchase or get a tender across the line.

“With mobile technology I can look it up in five minutes, there’s no delay. Tablets are lightweight, quick and because of the large screen, it’s a lot easier to see the data,” he said.

For a business that has a footprint in urban and regional NSW, great mobile broadband coverage needs to be a given: “Commuting between clients, some of which are located a two hour drive away, can really impact on work flow if we’re not connected. Telstra’s service and network spread means our people can continue to be productive and deliver on our customer promise,” David said.

The resulting word of mouth endorsements means the firm doesn’t have to spend additional funds marketing its brand. More good news for the bottom line.
With 126 employees in five offices and more than 50 vehicles constantly on the road, real estate billboard company ABC Photosigns is using tablets and mobile broadband to make its out-of-office staff up to 20 per cent more efficient.

ABC Photosigns produces signage and promotional material for agents across Australia. Its drivers install and take down more than 100,000 mini billboards a year.

Innovation is a critical part of the ABC Photosigns business. In 1992, it was the first company to bring full colour photographic billboards to the Australian market and has grown from just three employees.

It’s a business on the move in many ways but management recently realised that the time spent by its drivers checking installations and following up with clients was squeezing productivity and profit margins.

“Traditionally, drivers would mark-off installed signs on a run sheet and when they returned to the office at the end of the day, they’d e-mail clients to tell them about the installation,” said Managing Director Mick Hollingsworth.

“We needed to change how we managed that process in a way that would give us and our customers an edge over competitors without creating unnecessary administrative work.”

Mick spoke to ABC Photosigns’ information and communications technology partner, Telstra Business, about developing a solution.

“Telstra Business set us up with 45 Samsung seven-inch tablets over Telstra Mobile Broadband and our IT department developed a specialised Android app to integrate real-time customer communications,” Mick said.

“Our drivers now use their tablets to take a photo of the newly-installed billboards. The app does the rest by automatically assigning a job number and sending an e-mail, with image, to the agents.”

This clever solution - and the unrivalled reach of Telstra’s networks which cover 99 per cent of the population - has produced a fundamental change in ABC Photosigns’ operations.

“There’s no need for our drivers or admin staff to send an email to the client at the end of the day – everything’s done on the road,” Mick said.

“If clients need adjustments to signage, they can tell our drivers while they’re still out of the office.

“We estimate our drivers are able to spend up to 20 per cent more time on their core job of installing and removing boards.

“Because of those efficiencies, the business can grow by another 15 per cent before we need to employ more staff.”

Customer satisfaction has also improved.

“We’re immediately notifying clients when a board has been installed and now they can see the sign placement as well,” Mick said.

“Our sales team is also using tablets as selling tools for the business – it shows we’re an innovative company that’s prepared to embrace technology to stay ahead of the competition.”

Mick believes the joint approach to the project reflects Telstra’s ability to understand customer needs and provide cutting-edge products.

“Telstra has been an important partner of ours for years. Telstra understands our business and is prepared to invest in technology,” he said.
