

Telstra Cloud Sight

Cloud is transforming organisations, are you prepared?

By 2020,
80% of cloud
breaches

will be a result of
mismanagement,
misconfiguration or
insider theft

Lack of internal
expertise
and security

are the top cloud
challenges for IT
executives in 2017

Ongoing
management
and maintenance
of their cloud

is a current challenge
for 38% of senior IT
professionals and CIOs

If not managed properly, the potential risks of public clouds can quickly negate the benefits.

Security breaches can occur due to misconfiguration or mismanagement of credentials by users. Customer data hosted in cloud environments that aren't compliant with industry standards such as Payment Card Industry Data Security Standard (PCI DSS) can easily be stolen or mistreated. Businesses can also inadvertently incur higher than expected costs, due to common issues such as forgetting to power-down resources after a project is completed.

All you need to build, automate and scale your cloud

Telstra Cloud Sight offers simple and clear management of your public cloud service. An automated orchestration engine enables you to configure each eligible cloud account easily, keep it compliant with your chosen blueprint, and under control with minimal human intervention.

The platform is built in modules by our experts from IT, network, security and cloud engineering teams. It follows best practice methodologies to provide you with the capabilities to build new, eligible cloud environments or manage existing ones.

Hyper-scale public cloud adoption continues to grow rapidly. More businesses are embracing the flexibility and scalability it makes possible, as well as the low starting costs and ease of using a broad range of resources and functionality. Amazon Web Services introduced over 1,000 new features in 2017¹ to deliver the breadth of services that businesses need at an affordable price, making it easy for them to adopt.

How Telstra Cloud Sight can solve these issues

Manage costs

Implement budget thresholds for your cloud accounts. Be informed when accounts reach budget limits and view recommendations to optimise costs. Cloud account resources can also be scheduled to be powered down over the weekends or during certain hours of the day when they aren't needed to avoid unnecessary costs.

Minimise security breaches

Create new accounts within the portal with compliance and industry best practice blueprints and continuously monitor to detect compliance breaches. Help secure your cloud accounts by restricting the access of your cloud resources to only authorised staff or vendors on a least-privilege and multi-factor authentication (MFA) basis.

Focus your resources

By utilising the compliance and cost features of Telstra Cloud Sight, you can leverage Telstra's experience to build optimised accounts in the cloud without requiring in depth skills within your organisation. Our building block approach allows you to build in the cloud with confidence and direct highly skilled cloud and development resources to strategic business applications.

How it works

Within Telstra Cloud Sight, different modules can be applied to your different cloud accounts depending on their nature, such as Dev and Test or Production. Each module has been built in consultation with experts from our cloud, network and security teams to according to proven best practice methodologies. We also add new modules periodically to deliver new features and capabilities to you.

Key features

Simple creation and configuration

Create cloud accounts which are secure, compliant and optimised to industry best practice standards.

Compliance monitoring and dashboards

The dashboard provides actionable intelligence of account compliance. See compliance scores at a glance with recommendations for improvements. Monitoring alerts allow administrators to take action immediately.

Budgeting visibility and control

View costs against each cloud account and each tagged user. See potential cost savings and automate budgeting alerts based on your pre-set expenditure rates.

Getting started

Telstra Cloud Sight allows a mix and match of features on an account by account basis. Multiple service tiers are available to cater for your needs. For the full list of features available within each service tier, please approach your Telstra account manager.

Telstra Cloud Sight can be implemented in combination with our Managed Cloud services to provide an even great level of coverage for your cloud environment above and beyond the platform alone.

Service tiers	Details
Essential	Best practice account deployment and management, cost optimisation and recommendations. Deployment of compliance blueprints, budget controls, tagging and resource scheduling.
Compliance	Continuous monitoring and reporting on compliance configuration and alerts on accounts that breach your chosen compliance blueprint. Actionable intelligence and remediation steps for each account.

Contact your Telstra account representative for more details.
