

Self-Service Interactive Voice Response (IVR)

Self-Service IVR is a fast, easy and affordable way to direct and automate customer calls into your organisation. Since it's delivered from the cloud and connects seamlessly to most phone systems, you can avoid high capital costs, deployment complexity or delays. Increasing capacity to match demand fluctuations is simple, while subscription-based pricing makes budgeting simpler.

The platform offers powerful capabilities to help improve staff efficiency and customer service. You can direct customer queries from both voice and touchtone inputs, and automate processes like payments to reduce the burden on your staff. Creating and modifying your own IVR scripts is easy with point and click control via a web portal. No coding or technical skills are required.

Self-Service IVR can integrate with popular cloud-based CRM systems like Salesforce™ or your own. Your people will see the IVR context of a call as well as customer history in their CRM interface to provide fast and personalised service.

Inbuilt analytics enable you to see statistics and heat maps on caller interactions, types of calls and more in near real time. You can drill down to details, or customise views and create graphics relevant to your business. This offers deeper insight into performance, and helps you react fast to address issues. Historical reporting also lets you identify long term trends so you can plan ahead.

Built on proven Genesys technology, Self-Service IVR is ideal for both small and large organisations. It offers a fast way to deploy or upgrade IVR capabilities while protecting your existing equipment investments, all without the inflexibility of traditional on-site systems.

Features	Benefits
Cloud-based platform <ul style="list-style-type: none">Securely hosted in our data centres	<ul style="list-style-type: none">Avoid large capital outlays on infrastructureNo costly set up or integration requiredEasily scale up to meet demand peaks
