

BUSINESS PROCESS eXCHANGE

TRANSFORMING THE WAY BUSINESSES CONNECT

Business Process eXchange is a computing service that integrates your business partners' systems and processes in the cloud, enabling you to collate real-time data without manual input. The service allows businesses with disparate platforms and systems to communicate and exchange documents with trading partners in electronic form. This includes various EDI documents, flat files, XML documents and other document standards. Using web-based technologies and innovative applications, Telstra can revolutionise collaboration across the enterprise and with your partners, customers and suppliers.

Telstra enables companies of all sizes to automate manual processes easily, seamlessly and securely. By streamlining business processes across sales/supply channels and reducing manual workflows, Telstra can help you lower costs, improve response times and increase productivity.

Key Features of Business Process eXchange

- A variety of connectivity options to suit your business requirements.
- Secure and reliable data transmission across the enterprise trading community.
- Real-time online design and changes to documents, workflow and business processes.
- Simple, effective and efficient interaction with customers and trading partners including Telstra for mobile service ordering.
- Easy access to information to help monitor your business activities and streamline collaboration across your trading community.

Key Benefits of Business Process eXchange

- Improves visibility of real-time business operations.
