

# Telstra Managed Security Services

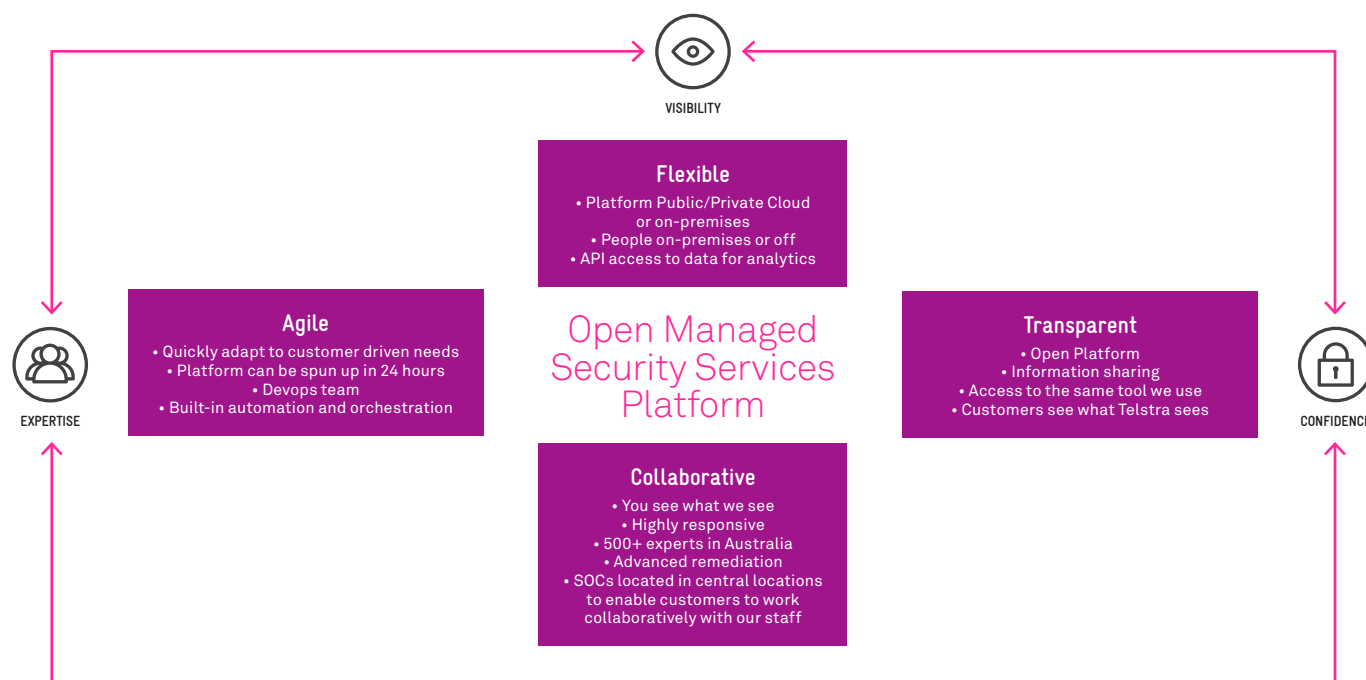

Think of all the ways your operations touch the outside world. Each touch point is an invitation and an opportunity for cyber criminals. Today's connectivity and technology allows crime, protest, espionage and mistakes to happen at a pace, scale and reach that is unprecedented.

## No one sees security like we do

It's more vital than ever to understand and manage the risks. But how well are you engaging with your senior executives and board in your organisation's ability to manage risk? And are you asking the right questions?

A more agile, intelligent and collaborative approach to cyber-security is essential. And that's exactly what Telstra's suite of Managed Security Services provides.

They're underpinned by a next generation, open source cyber-security platform in our Security Operations Centres. It's backed by a team of security experts, advanced discovery tools and proven incident response methodologies. Built from the ground up, it gives you visibility, expertise and confidence to manage risk and focus on the things that are important.

## Making the invisible, visible

Our cyber-security platform examines data from your network and end-points and correlates it with the latest threat intelligence, allowing us to rapidly identify threats relevant to your business. Crucially, these capabilities are automated, rapidly scalable, and completely transparent to our customers. With our services, you see what we see.

## Move confidently into the future

Now you can have 24/7 visibility of security across both on-premises and cloud infrastructure. Quickly and intelligently respond to security incident and manage risk more effectively. However you connect – to your offices, to mobile staff, to the cloud, or across many locations throughout the world – we've got your back. You can trust us to help you navigate the risk landscape end-to-end.

### More effective cyber-protection

- **Scalable visibility:** Efficient tools which allow visibility across a larger range of data and event sources with fast identification of potential security events and risk factors.
- **Improved global threat awareness:** Industry collaboration complemented by discovery tools focused on specific customer environments.
- **Faster remediation:** More efficient, context-aware tools to find threats quickly and resolve them earlier.
- **Scalable pricing:** Use only the tools you need for your environment. Pricing that allows you to send more data from more sources in your environment from multiple data sources.

## Consulting and Professional Services

Services to complement operations capability and facilitate response, mitigation and compliance

### Identity and Access Management

Monitoring of access control systems to help ensure users are authorised

### Endpoint and Mobility

Visibility and protection of end points (e.g. servers, desktops, mobiles)

### Network

Management and monitoring of network security infrastructure (e.g. firewall, content filtering, DOS). Physical, virtual or xxxxxxx

### Cloud

Visibility and protection of cloud platforms, application and data (e.g. IaaS, PaaS and SaaS)

### Application and Data

Protect data as it is transmitted, stored and used within applications

### Electronic

Visibility of and correlation with premise security (e.g. video monitoring, building alarms)

### People

Monitor and educate users to prevent people based attack vectors

### IoT

Visibility and protection of systems of connected objects

## Security Operations and Intelligence

### Powered by the Telstra Managed Security Services Platform

Operations capability (processes and people) overlaying platforms to validate event priorities and drive response with intelligent analysis of security data to find and prioritise security risks (e.g. Advanced Analytics)

### Services

**Security Monitoring:** The Security Monitoring service feeds event data from a variety of sources across both your on-premises and cloud infrastructure. With 24/7 visibility and actionable reports in plain English, you can gain deeper understanding of your risk status and clearer resolution paths for mitigation. Rapid and continuous improvements working hand in hand with our customers to help ensure requirements are met.

### Why Telstra for Managed Security Services?

**Insight and experience:** We've been helping businesses manage risk and protect data for decades, while protecting our own network for even longer. So we understand the security issues you face.

When it comes to cyber-security, we are constantly keeping ourselves up to date with the latest solutions, including developing new technologies and techniques to give you better insight into your data, allowing you to make the informed decisions about how to manage your risk.

**Exceptional people:** You can rely on one of the largest and most qualified groups of security professionals in Australia to protect your business. Owing to our size and scope of operations, we attract the best and brightest in the field. We have Data Scientists, Dev Ops, Business and Security Analysts working together to power our platform and provide insights into what is happening in your environment.

**Local and global intelligence:** We work closely with leading security vendors, the Australian Government, and the worldwide security community to provide the latest intelligence on the local and global threat landscape.
