

Trusted cyber-security solutions for an ever-changing landscape

Telstra Security

Managing risk in a connected world

23.7%

of Australian organisations surveyed detected a business interrupting security breach during an average month

In 2015, the number of mobile malware instances increased by almost 50 per cent in the first quarter alone.

Ransomware and phishing continue to rise in Australia – in 2015 phishing increased by

29%

Organisations that attribute responsibility to C-level or business line managers and conduct frequent cyber security briefings are better positioned to handle security incidents.

Telstra Cyber Security Report 2016

Connectivity comes with tremendous benefits – but it also comes with risks that you need to manage

- Successful businesses already manage complex risks today. However as the technology required to run your business evolves, so does the volume and complexity of threats against it. Telstra Security helps business to effectively manage risk and enable business growth in the world of cyber
- By working with an organisation with a strong partner-network, one that oversees and protects the largest network in Australia, you can accelerate your journey to building a smarter, stronger and more effective cyber-security posture.
- Called a 'hothouse of talent' by the Australian Financial Review, Telstra is at the forefront of cyber-security. Leverage our knowledge and expertise, and help keep global cyber-threats in check.

Are you at risk?

Telstra understands that cyber security is complex and there is not a single solution that will combat all security challenges. It's not just the technology, but the people using it. That's why we developed the Five Knows of Cyber Security. Ask yourself each of the five questions below to see if your business is at risk.

1

Know the value of your data

You need to know what value it has, not just for your organisation and customers but also the value to those who may wish to steal it. All data has value to someone.

2

Know who has access to your data

You need to know who has access both within an organisation and externally, like who has 'super user' admin rights in your organisation and within your trusted partners and vendors.

3

Know where your data is

You need to know where your data is stored. Is it with a service provider? Have they provided your data to other third parties? Is it onshore, off-shore or in the cloud?

4

Know who is protecting your data

You need to know who is protecting your valuable data. What operational security processes are in place? Where are they? Can you contact them if you need to?

5

Know how well your data is protected

You need to know what your security professionals are doing to protect your data 24/7. Is your data being adequately protected by your employees, business partners and third-party vendors who have access to it?

How we help protect you from cyber-threats

Our four pillars of cyber-security provide a solid foundation on which to build confidence in an ever-changing threat landscape.

Advise Consulting

Expert resources to help you assess and mitigate risk.

We can work with you to design customised solutions built specifically to suit your digital environment. With our expert resources, which include over 30 senior security consultants, and extensive consulting capabilities, including acquisitions like Bridgepoint, we can assess your high-level security posture while managing and mitigating business security risk.

Protect Managed Services

Safeguarding your assets with our extensive range of managed solutions.

Let us help you build digital trust with your customers, with the backing of our extensive range of security services and solutions. Strengthen your security posture, proactively manage incidents, and extend the security capabilities within your organisation. We have comprehensive offerings across all verticals, from one-off infrastructure services to fully managed outsourced environments – all designed to deliver seamless business outcomes.

Design Professional Services

Customised solutions built specifically for your environment.

Telstra has over 40 senior security personnel, here to help you shape a broader strategic response to cyber risk. We can understand your current capability and build appropriate strategies, architectures, solutions and services for your environment, as well as managing deployment.

Analyse Intelligence and Analytics

Know your adversary with deep insights into the threat landscape.

Our security solutions and services are underpinned by world-class security operations capabilities, providing you a broader and deeper view of the threat landscape. In a single year, Telstra investigates over 3,500 major security events, with over 3,000 security services under management at any given time. Our T4-certified Security Operations Centre gives organisations the confidence to transform their business processes through digital technology.

What sets us apart?

We're committed to helping you build digital trust with your customers through delivery and operational excellence.

World-class security operations

Including the Telstra Security Operations Centre and our Global Operations Centre – overseeing our entire network.

Security intelligence with end-to-end visibility

With an end-to-end view of our own vast network, giving us a more expansive view of the entire threat landscape to counter emerging threats.

24/7 proactive monitoring

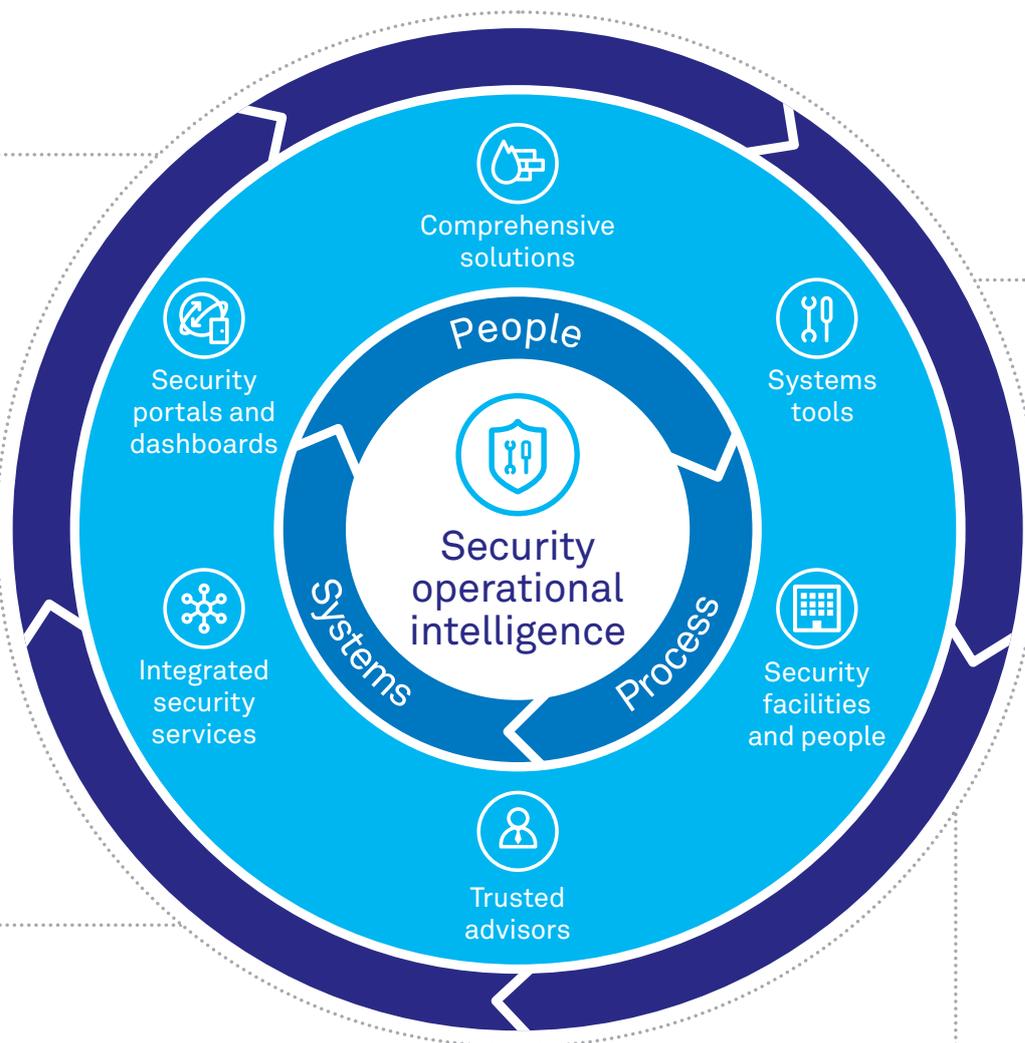

So we can detect most issues before they become issues – and act just as rapidly.

More partners, more protection

With Telstra, you're connected to a larger team of expert partners, who stand with you against online threats across the board.

Security accreditation and compliance

We have the skills and expertise to help you attain ISO 27001 certification, giving you the confidence to realise and optimise opportunities in the digital age.
