

WEB PROTECTION AND OPTIMISATION SERVICE

Your organisation's websites may be crucial to provide products and services to your customers. So you need to fully secure your web assets, without compromising your business-critical online user experience and website availability.

It's essential to ensure these websites are protected from criminal activity that could slow response times, or limit availability. Your customer experience can also be improved by automatically ensuring content is accessed from servers that are nearest to the end-user.

How we can help

We can assist you to design, develop and deploy a Web Protection and Optimisation solution suitable for your organisation, improving both content delivery and security of your web assets.

With this service, we can route your web traffic through the cloud, to detect and block malicious traffic and denial of service attempts, while optimising legitimate traffic through load balancing and cached delivery methods.

We can also provide ongoing management of your new web protection solution. Our experts will proactively monitor your web assets for service impacting security issues, then raise tickets for escalation through the Telstra Security Services (TSS) portal which you will have visibility of.

Key benefits

- Malicious traffic is blocked quickly and effectively.
- Accelerates legitimate traffic for maximum responsiveness.
- Optimises server according to geographic location of the end-user.
- Choose from Self Managed or Telstra-managed service.

Engagement process
