

Telstra Business Connect Portal CGA

Use the Telstra Business Connect portal to redefine your default user settings. You can set or change your default network group policy for each device i.e. Mobile or Tablet. This allows you to stipulate whether you wish to connect via the internet or VPN for all your devices.

To sign into the portal

Use the following URL to sign into the Telstra Business Connect portal <https://ucone.tipt.telstra.com>

Change your default group policy

To change your default settings:

For each device select to connect via Internet or Company Network (VPN)

1. Click on Apply to save your changes

User settings – search

The screenshot displays two sections of the Telstra Business Connect portal. The first section, titled "Group Policy", includes a heading and a sub-heading: "Set the default group policy for the networks each Telstra Business Connect client should connect." Below this is a table with two columns: "Internet" and "Company Network". The rows list various device types: "Telstra Business Connect Desktop (Auto Switching)", "Telstra Business Connect Mobile", "Telstra Business Connect Tablet", "UC-One Desktop", and "UC-One Mobile". Each row has a radio button under each column, with the "Internet" radio button selected for all. Below the table is a green "Apply" button with a right-pointing chevron. The second section, titled "User Settings", has a sub-heading: "Search for users in your group by their User IDs." It features a text input field and a green "Search" button with a right-pointing chevron.

	Internet	Company Network
Telstra Business Connect Desktop (Auto Switching)	<input checked="" type="radio"/>	<input type="radio"/>
Telstra Business Connect Mobile	<input checked="" type="radio"/>	<input type="radio"/>
Telstra Business Connect Tablet	<input checked="" type="radio"/>	<input type="radio"/>
UC-One Desktop	<input checked="" type="radio"/>	<input type="radio"/>
UC-One Mobile	<input checked="" type="radio"/>	<input type="radio"/>

The search functionality can be used by the **Customer Group Administrator** if there is a need to search and change the default settings for a particular user. To search for a User:

1. In the **Search** field type the **Telstra Business Connect User ID** and tap **Enter**.
2. The user will appear in your Search result.

Making changes to user settings

Use this section to provision a particular device or enable **Lync integration**.

1. To the right of your User ID **select** which mode of connection you wish to activate for **each** device.

- Not yet provisioned
- Group Policy
- Internet – connect using the Internet
- Corporate Network – connect using Virtual Private Network (VPN)

2. Click on the **Apply** button  to apply your changes.

Note: The **Provision** button  can be used as a shortcut to activate any “not yet provisioned” device into Group Policy. By selecting the **Provision** button each user will automatically be assigned Shared Call Appearance for the PC, tablet and mobile devices. Each SCA is assigned appropriate Identity/Device Profile Type: either Telstra Business Connect mobile device, Telstra Business Connect tablet device or Telstra Business Connect PC device.

Enable Lync Integration

To apply Lync integration to your desktop client place a tick in the **Enable Lync Integration** check box.

1. Click onto the **Apply** button .
2. The Lync integration will only apply to the desktop client.

Modify the network setting for a particular user’s Telstra Business Connect client type by selecting the respective drop down option.

If “Internet” or “Corporate Network” is selected in the drop down option, setting this option will ignore the Group Policy for that user’s client type. This is useful if a user has special network requirements that may be unique compared to other users in the company (e.g. a user who travels frequently might be more suited to have their clients set to “internet”).

Lync integration will only work on Telstra Business Connect with Lync integration version, not on standard Telstra Business Connect.

Click the “Provision” button as a shortcut to set the drop down options of Telstra Business Connect client types that are Not yet provisioned” to “Group Policy” for the respective user.

Click the “Apply” button at the bottom of to make sure changes are submitted. If you have made a lot of changes, please be patient as it may take some time for all changes to be processed.

	Desktop	Mobile	Tablet	UC-One Mobile	UC-One Desktop	Enabled Desktop Lync Integration	Provision All Devices
6@gcc.com	Group Policy	Group Policy	Group Policy	Not yet provisioned	Corporate Network	<input type="checkbox"/>	Provision
7@gcc.com	Internet	Group Policy	Group Policy	Group Policy	Group Policy	<input type="checkbox"/>	
8@gcc.com	Group Policy	Group Policy	Group Policy	Not yet provisioned	Not yet provisioned	<input type="checkbox"/>	Provision
9@gcc.com	Group Policy	Group Policy	Group Policy	Not yet provisioned	Internet	<input type="checkbox"/>	Provision
