

Picking the right place

Work out where to install the **nbn**[™] network equipment with these templates

Telstra nbn fibre equipment template

It's important to think about where you'd like the nbn equipment installed inside your home.

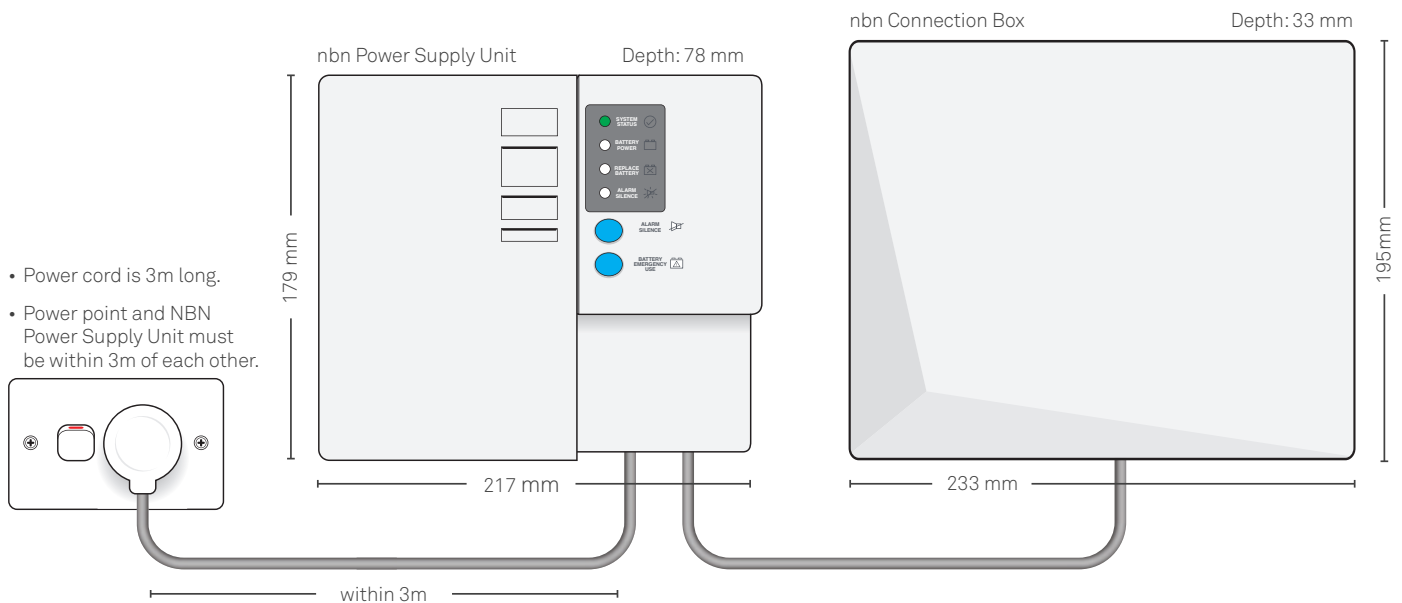

To make it easy to see how the nbn equipment will look in your home and help you plan where you'd like it installed before your nbn installation appointment, we've created this nbn equipment template.

There are two templates in this document – one for the nbn Connection Box and one for the nbn Power Supply Unit (nbn PSU).

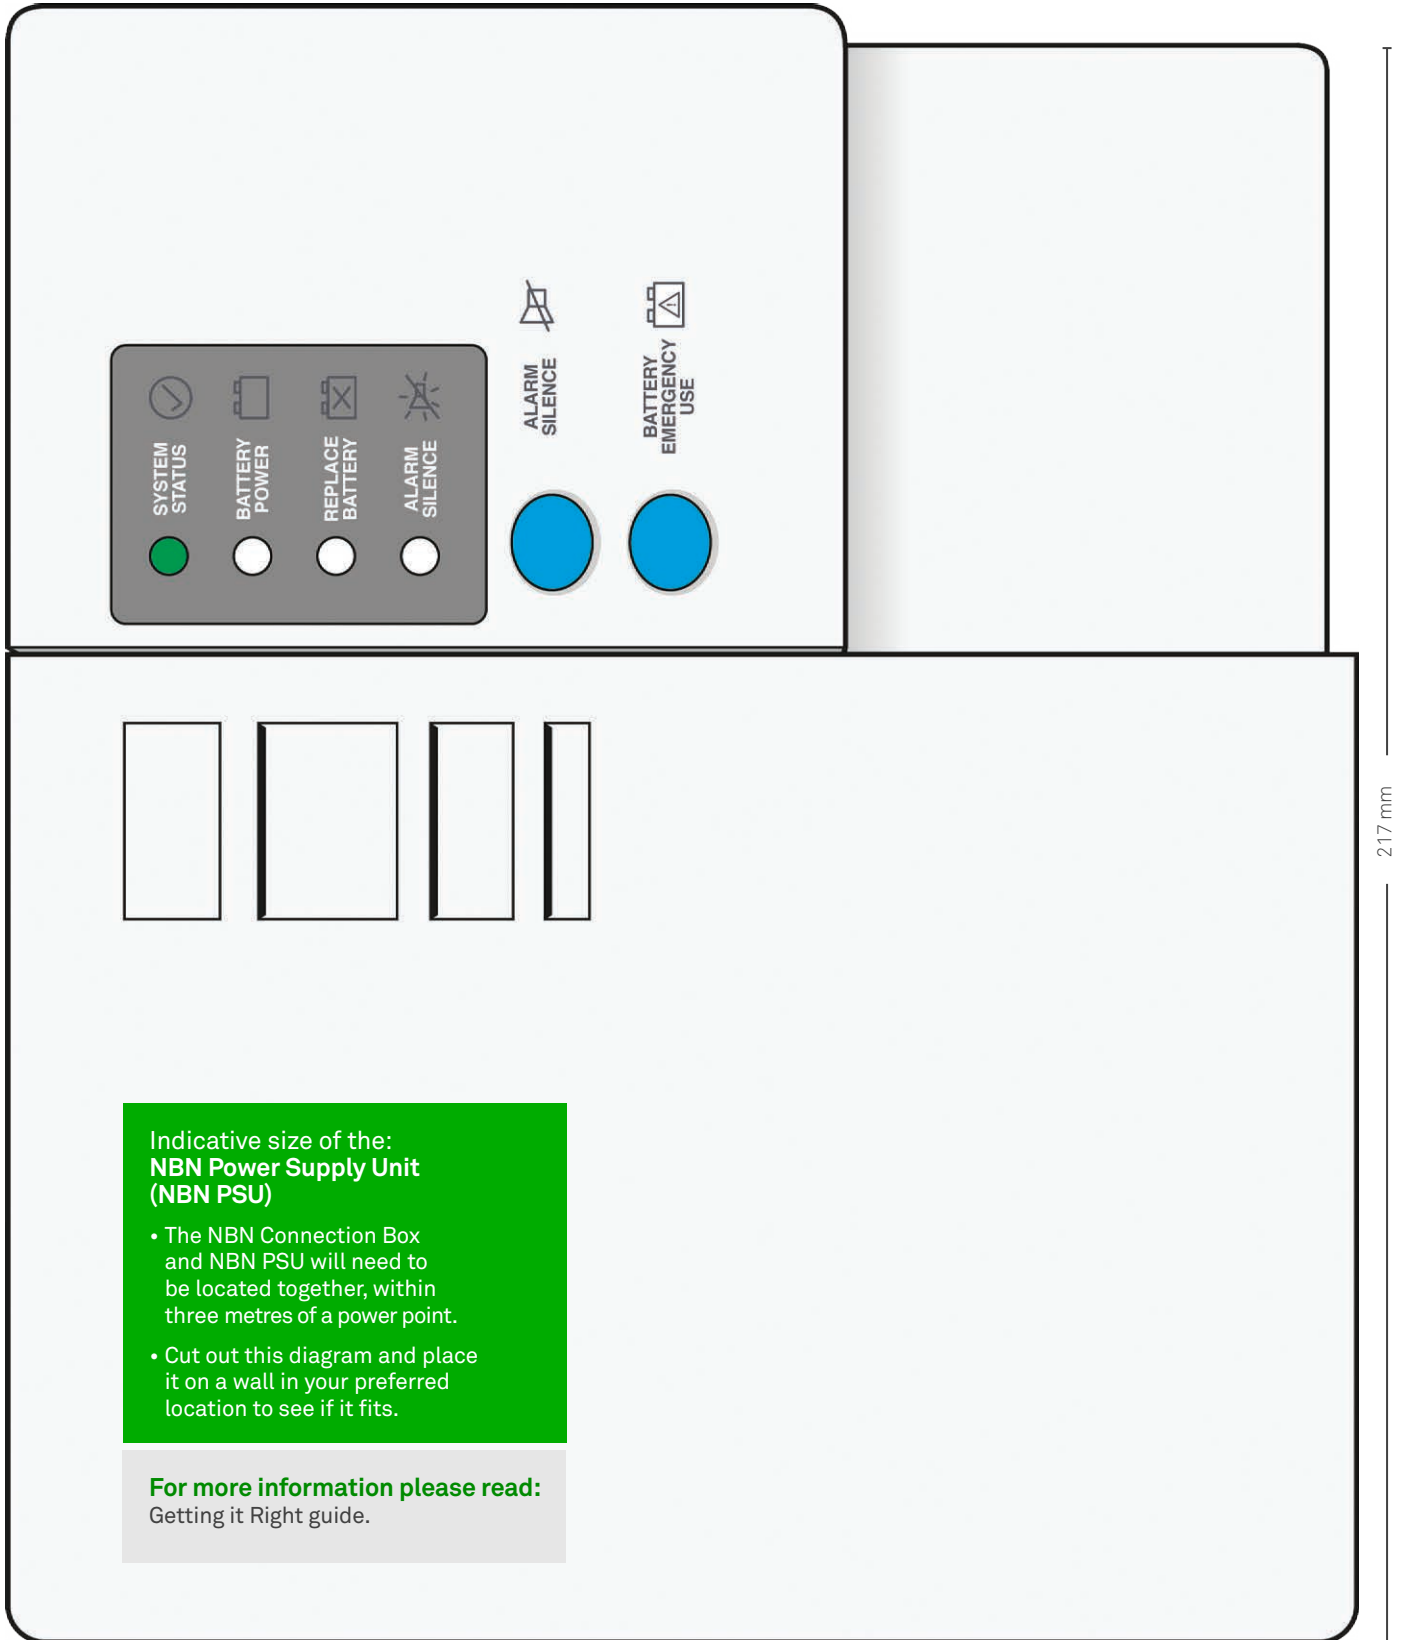

To help you decide on the best location for the nbn equipment with the nbn co installer, cut out the diagrams and place them on the wall inside your home in your preferred location.

When the nbn co installer arrives, show them where you want the NBN equipment installed. The nbn co installer will confirm if your desired location will work as part of a standard nbn installation. If your nbn installation is non-standard, additional charges may apply.

Getting it Right guide available online
at telstra.com/nbn

179 mm

217 mm

↓ Please allow a 50mm clearance to open the battery cover ↓

195mm

233 mm

Indicative size of the:
NBN Connection Box

- The NBN Connection Box and NBN PSU will need to be located together, within three metres of a power point and close to a phone point.
- The NBN Connection Box should be positioned close to your main computer, the T-Gateway® and main voice ports.
- Cut out this diagram and place it on a wall in your preferred location to see if it fits.

* Please be aware that if you want your T-Gateway® in a different room to the NBN Connection Box, the Telstra installation of your equipment will be non-standard so additional charges may apply and you will not be eligible for our T-Gateway® self installation option. Please read Connecting your Telstra services on the NBN for more details.
