

Uniden®

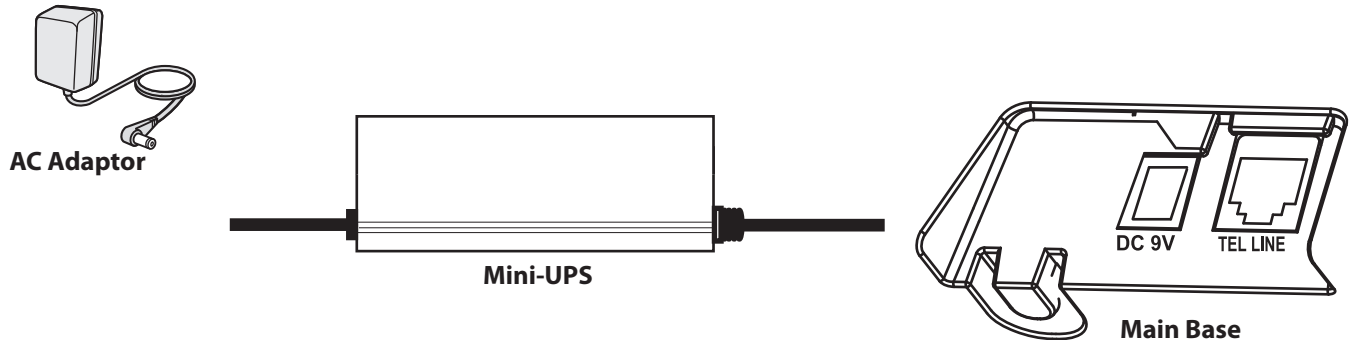

Mini-UPS

Uniden's Mini-UPS has an internal lithium battery of 2200mAh capacity.

How does it work?

Uniden's Mini-UPS works with cordless bases that support DC 9V power input.

Connect one end of the Mini-UPS to the power jack (DC 9V IN) on the main base and the other end to the AC adaptor. The AC adaptor will charge the Mini-UPS and supply power to the base. During power failure, the Mini-UPS will supply power to the base, enabling it to work for a couple of hours.
