Do you have any of the following?

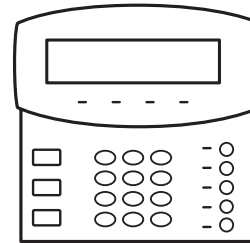

If not, please continue to page 6.

Monitored
fire alarm

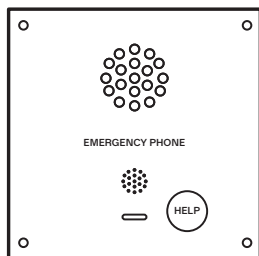

ATM or
EFTPOS

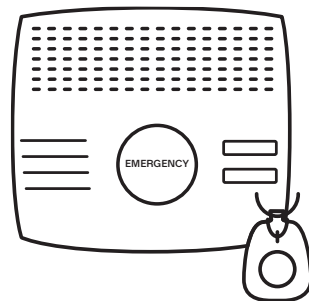

Back-to-Base
security alarm

Fax or
PBX

Emergency
lift phone

Medical
alert service

If yes, stop!

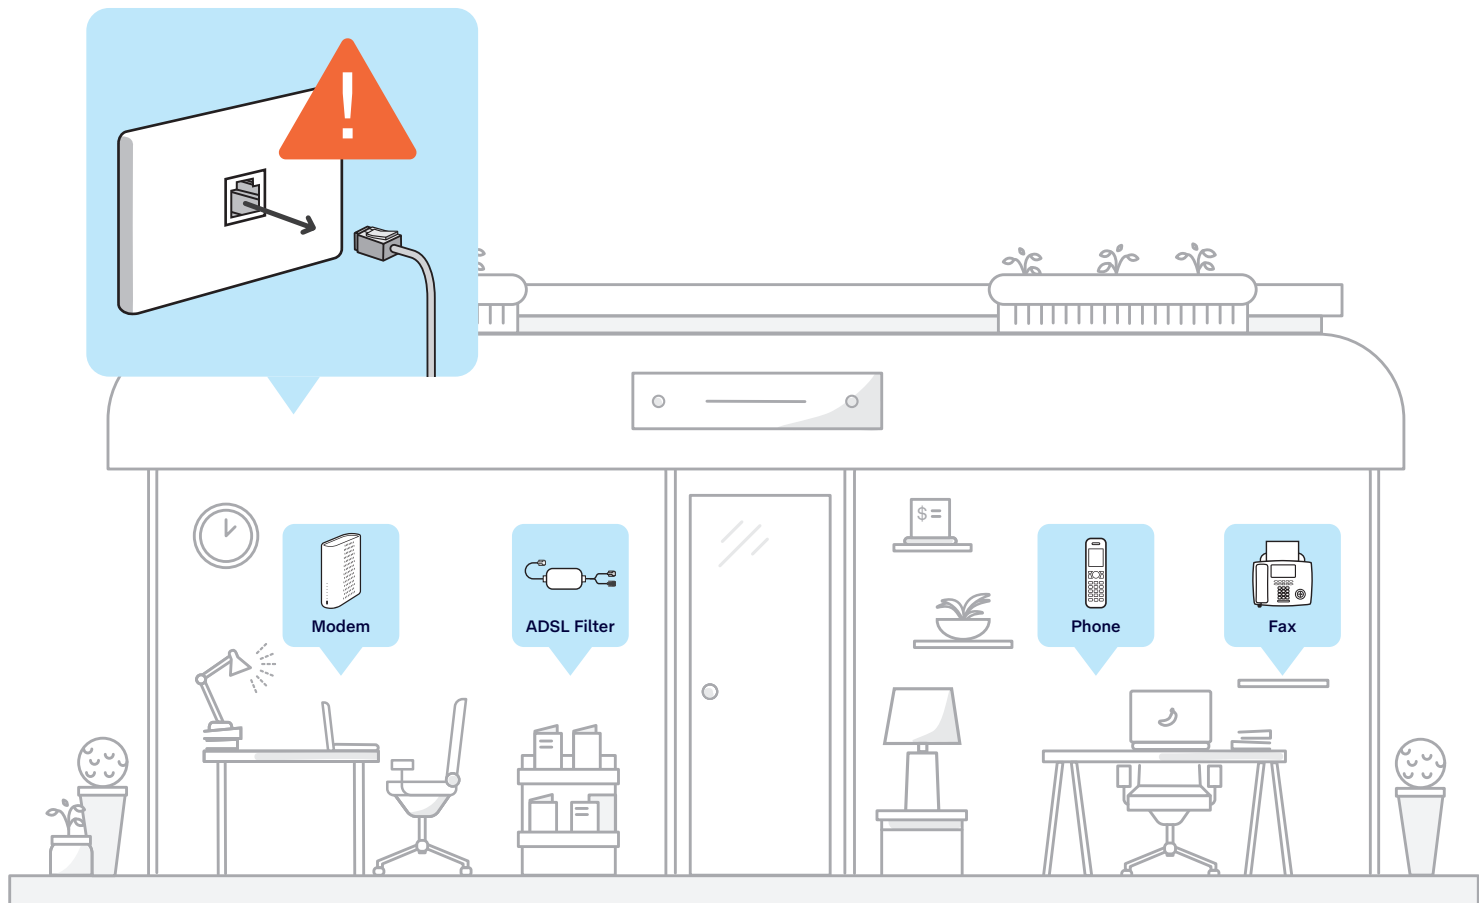

Contact your equipment provider(s) to check that services you rely on, like medical, fire and other equipment will work on the **nbn** network.

Additional information is on page 17.

Unplug all devices from your phone sockets.

Make sure you've disconnected all devices such as telephones, modems, ADSL filters, EFTPOS and fax machines from your telephone wall sockets. After you've switched to the **nbn**, these sockets will no longer work.

Parts you will need.

Telstra Business
Smart Modem™

Netgear LTE
Modem LM1200

Black power
adaptor

Ethernet
cable

Wi-Fi
card

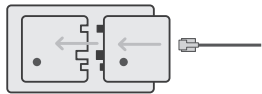

Optional cable

Connect your phone.
Telephone cable
with clear ends.

Setup steps.

Follow steps 1–4 to get connected.

On first use, your Telstra Business Smart Modem may take up to 15 minutes to connect.

Got an older-style telephone wall socket?

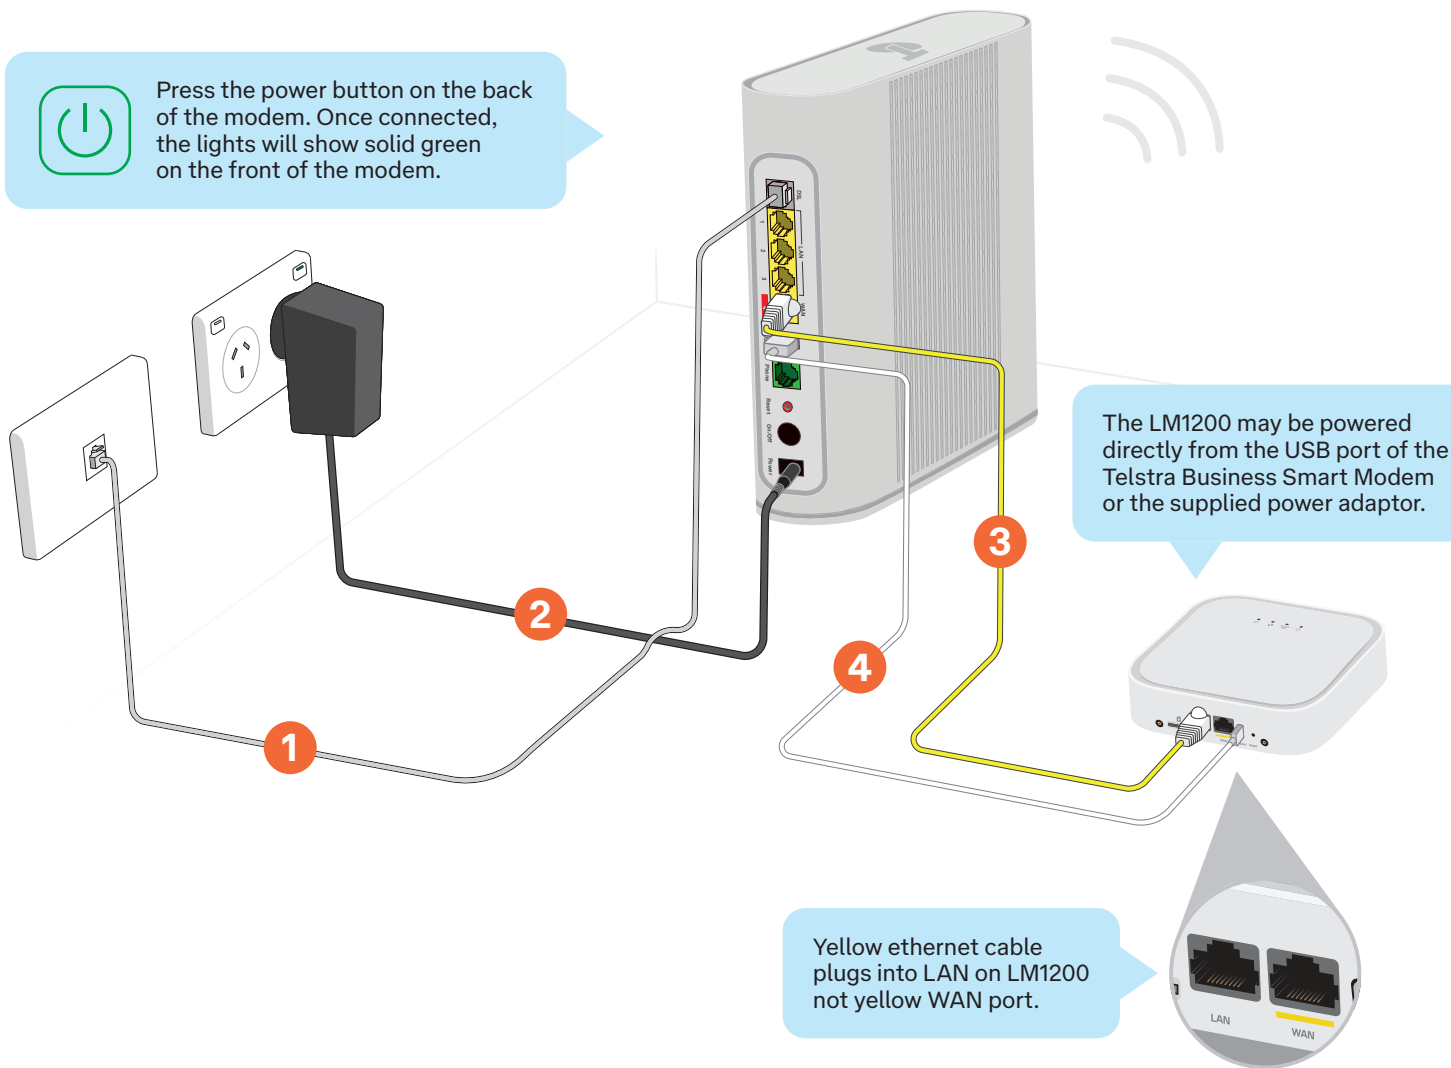

You'll need to purchase an adaptor.
These can be found at most hardware
or electronics stores.

The Netgear LTE Modem LM1200 ensures
your internet keeps working even in the
event of a fault in your **nbn** connection.

Press the power button on the back of the modem. Once connected, the lights will show solid green on the front of the modem.

Wi-Fi setup.

Search for **Wi-Fi name** and enter password shown on Wi-Fi card.

Repeat steps to connect your other devices via Wi-Fi.

Change your Wi-Fi network and password.
Refer to page 18 for details.

Troubleshooting.

Oh no! Something went wrong?

Here's a few tips to help you, but first, have you tried the following?

- 1 Switch it off and back on and then wait a few minutes.
- 2 Make sure your modem is elevated and not placed near items that can interfere with your Wi-Fi, such as fridges, thick walls, fish tanks and microwaves.
- 3 Make sure your Netgear LTE Modem LM1200 is connected to red LAN port and also to power via power adaptor or USB port on Telstra Business Smart Modem. This ensures your internet can keep working even in the event of a fault with your **nbn** connection.

A great guide to internet speeds can be found at:

 Ethernet WAN	 A device is connected to this port
	 Full data connectivity
 Signal Strength	 The LTE connection is good – blinking indicates data traffic
	 The LTE connection is weak – blinking indicates data traffic
	 The modem can't connect to the LTE network

FAQs.

Will I be able to use my devices during set up?

During set up of your new **nbn** connection you will temporarily lose access to your existing services, including your internet, telephone device(s), medical, fire and security alarms, as well as other equipment like EFTPOS machines. This means it's important you have an alternative form of communication handy during set up, such as a charged mobile phone.

I rely on a safety-critical device. Do I need to do anything before I install the nbn?

If you use a medical alarm, fire alarm or lift emergency phone, contact your device provider to check that it will work on your new **nbn** service, or whether you'll need to find an alternative solution, such as a wireless/mobile alarm solution.

You should register these devices with **nbn** by calling **1800 227 300** or visiting **nbn.com.au/compatibility**

Will my monitored security alarm work on my new nbn connection?

It's possible your monitored security alarm will work with your **nbn** service; however, you should check with your alarm provider before switching. You should also test your alarm on the day your new plan is activated.

For more information, visit **nbnco.com.au/learn/device-compatibility/security-alarms**

Will my devices work during a power blackout?

Devices connected to your **nbn** service will not work during a power blackout, so you should consider having an alternative form of communication handy, such as a charged mobile phone. If you have a safety-critical device like a medical alarm, fire alarm or lift emergency phone, speak to your device provider about alternative solutions before you install the **nbn** so you can keep your service active during a power blackout.

Changing your Wi-Fi details.

Change your Wi-Fi network and password.

The Wi-Fi details we install at the factory are designed to be unique and above all secure, but we understand that you may want to change them to something else.

If you previously had an internet service with us or another provider, did you know you can re-use those old Wi-Fi network details (network name and password) on your new modem? This means all your devices will just automatically connect and you won't have to reconnect everything.

To change your Wi-Fi details, ensure you are first connected to your network and simply open a browser window and type in **http://mymodem** or **http://192.168.15.1**

The user name is **admin** and the password is located on your Telstra Business Smart Modem (don't worry, you can change these too if you like!).

Once you are logged in, click on the tab marked '**Wi-Fi**' just don't forget to click '**Save**' once you have made your changes.
